Announcements

Announcement—1265

Absorption Spectra

Absorption and fluorescence spectra of crystalline pyrene, J. Ferguson—765

Absorption and ionization coefficients of ethylene oxide, Austin Lowrey, III, and K. Watanabe—208

Absorption coefficients of C_6H_6 and H_2 in the vacuum ultraviolet, S. M. Bunch, G. R. Cook, M. Ogawa, and A. W. Ehler—740(L)

Absorption coefficients of methyl, ethyl, *n*-propyl, and *n*-butyl alcohols, M. Ogawa and G. R. Cook—747(L)

Absorption coefficients of O_2 in the vacuum ultraviolet region, M. Ogawa and G. R. Cook—173(L)

Absorption spectra of molten salts, Benson R. Sundheim and Jacob Greenberg—439

Absorption spectrum of crystalline anthracene. Measurements on the absorption edge, J. Ferguson and W. G. Schneider—761

Anisotropic color centers in α-quartz. II. Germanium-doped synthetic quartz, Alvin J. Cohen and Herbert L. Smith—401

Characteristic frequencies of triethylborane, Walter J. Lehmann, Charles O. Wilson, Jr., and I. Shapiro—777

Characteristic frequencies of trimethylborane, Walter J. Lehmann, Charles O. Wilson, Jr., and I. Shapiro—781

Chemical determination of the oscillator strength of *F* centers, Allen B. Scott and Marian E. Hills—24

Comment on "Evidence for the normal cyanide structure of $(CH_3)_3SiCN$," Harold C. Beachell—991(L)

Effect of pressure on cyanide and carbonyl spectra in solution, R. R. Wiederkehr and H. G. Drickamer—311

Electronic spectra of free radicals at 4°K—HNO, NH, and OH, G. Wilse Robinson and Maclyn McCarty, Jr.—350(L)

Electronic spectra of free radicals at 4°K—NH_2, G. Wilse Robinson and Maclyn McCarty, Jr.—349(L)

Enhancement of phosphorescence ability upon aggregation of dye molecules, Eion G. McRae and Michael Kasha—721(L)

Evidence for the normal cyanide structure of $(CH_3)_3SiCN$, M. Richard Linton and Eugene R. Nixon—990(L)

Far ultraviolet absorption spectra of small ring hydrocarbons, Barbara B. Loeffler, Elspeth Eberlin, and Lucy W. Pickett—345

Force constants of tetrahedral molecules, C. W. F. T. Pistorius—514(L)

Hfs of the H_2S molecule and its electronic structure, Kimio Ohno, Yukio Mizuno, and Masataka Mizushima—691

Higher ionization potentials of linear triatomic molecules CO_2, CS_2, COS, N_2O, Y. Tanaka, A. S. Jursa, and F. J. LeBlanc—350(L)

Hydrogen→deuterium exchange reaction in α-keratin, R. D. Fraser and T. P. MacRae—1120

Hydrogen fluoride polymer spectrum, hexamer and tetramer, D. F. Smith—1040

Hydrogen formation in concentrated aqueous sodium sulfate solutions by cobalt-60 gamma-ray radiation, H. A. Mahlman—1256(L)

Infrared absorption spectra of chromyl fluoride and chromyl chloride, Willard Earl Hobbs—1220

Infrared absorption spectra of SO_2 and CO_2 in aqueous solution, Llewellyn H. Jones and Eugene McLaren—995(L)

Infrared spectra of HCl-HBr mixed crystals, G. L. Hiebert and D. F. Hornig—316

Infrared spectra of the isotopic nitrous oxides, G. M. Begun and W. H. Fletcher—414

Infrared spectrum of antimony trichloride-benzene complex, L. W. Daasch—1005(L)

Infrared spectrum of $Ca(OH)_4$, W. R. Busing and H. W. Morgan—998(L)

Infrared spectrum of cyanate ion as a solid solution in a potassium iodide lattice, Arthur Maki and J. C. Decius—1003(L)

Infrared spectrum of methyl chloride near 6000 cm^{-1}, Robert G. Brown and T. Harvey Edwards—384

Internuclear distance and *l*-type doubling in carbon disulfide, A. H. Guenther, T. A. Wiggins, and D. H. Rank—682

Interpretation of infrared dichroism in axially oriented polymers, R. D. B. Fraser—1120

Iodine complexes in inert solvents. V. Evidence of consecutive mechanisms for the reaction between iodine and ethanol or methanol, P. A. D. deMaine—1002(L)

Ionization and dissociation of NO_2 and N_2O by electron impact, J. Collin and F. P. Lossing—900

Ligand field theory of Ni(II) complexes. I. Electronic energies and singlet ground-state conditions of Ni(II) complexes of different symmetries, Gilda Maki—651

Line shape in the $OH\ ^2\pi - {}^2\Sigma$ transition, Walker E. Kaskan—729(L)

Liquid-gas infrared intensities, pressure-induced absorption, and the temperature dependence of infrared intensities in liquids, Willis B. Person—319

Microwave spectra of molecules exhibiting internal rotation. III. Trimethylamine, David R. Lide, Jr., and D. E. Mann—572

Microwave spectrum of $CH_2DCH{:}CH_2$; equilibrium conformation of propylene, Dudley R. Herschbach and Lawrence C. Krisher—728(L)

Microwave spectrum of methyl difluorosilane, J. D. Swalen and B. P. Stoicheff—671

Millimeter-wave spectrum of formic acid, Gunnar Erlandsson—71

Molecular association of methanol vapor, Richard G. Inskeep, James M. Kelliher, Paul E. McMahon, and Bruce G. Somers—1033

New band system in the afterglow of nitrogen, F. LeBlanc, Y. Tanaka, and A. Jursa—979(L)

Note on the determination of molecular structure from spectroscopic data, Victor W. Laurie—704

Paramagnetism of hydrocarbon-conc. H_2SO_4 systems, H. Kon and M. S. Blois, Jr.—743(L)

Phase changes and spectral shifts, W. W. Robertson and S. E. Babb, Jr.—953

Planarity of the formic acid monomer, Ralph Trambarulo, Arthur Clark, and Charles Hearns—736(L)

Polarized infrared spectrum of potassium thiocyanate, Llewellyn H. Jones—1234

Raman spectra of group VI hexacarbonyls, Alfred Danti and F. Albert Cotton—736(L)

Recombination of atomic oxygen observed by means of the flash spectroscopy of molecular oxygen in the vacuum ultraviolet, Joseph A. Golden and Albert L. Myerson—978(L)

Rotational structure of the infrared absorption spectrum of hydrogen peroxide vapor, Eizi Hirota—839

Sensitive vibrational frequencies. III. Empirical relation for electronegativity applicable to the calculation of group electronegatives, J. K. Wilmshurst—733(L)

Spectral comparison of polyenes, cumulenes, and polyynes, Helmut Krauch—898
Spectroscopic study of the monotropic forms of monochloracetic acid, José R. Barceló, M. Pilar Jorge, and Clara Otero—1230
Stark effect from 1.1 to 2.6 millimeters wavelength: PH_3, PD_3, DI, and CO, C. A. Burns—427
Streaming dichroism in polymer solutions: The calculation of results, George R. Bird—1155
Ultraviolet and infrared absorption spectra of 4-methoxypyridinium salt, Hiroshi Tsubomura—355(L)
Uncertainties in the measurement of the oscillator strength of the ultraviolet bands of OH, P. J. Dyne—999(L)
Vibrational intensities. IX. C_2H_6: Extension and revision, I. M. Mills, W. B. Person, J. R. Scherer, and Bryce Crawford, Jr.—851
Vibrational spectra and thermodynamic properties of ClF_3 and BrF_3, Howard H. Claassen, Bernard Weinstock, and John G. Malm—285
Vibrational spectra of BBr_3 and BI_3, Tunis Wentink, Jr., and Victor H. Tiensuu—826
Vibrational spectrum of nickel carbonyl, Llewellyn H. Jones—1215
Infrared of
α-Keratin, R. D. Fraser and T. P. MacRae—1120
Antimony trichloride-benzene complex, L. W. Daasch—1005(L)
Axially oriented polymers, R. D. B. Fraser—1113
BBr_3 and BI_3, Tunis Wentink, Jr., and Victor H. Tiensuu—826
Carbon disulfide, A. H. Guenther, T. A. Wiggins, and D. H. Rank—682
$Ca(OH)_4$, W. R. Busing and H. W. Morgan—998(L)
Chromyl fluoride and chromyl chloride, Willard Earl Hobbs—1220
$(CH_3)_3SiCN$, H. Richard Linton and Eugene R. Nixon—990(L)
$(CH_3)_3SiCN$, Harold C. Beachell—991(L)
ClF_3 and BrF_3, Howard H. Claassen, Bernard Weinstock, and John G. Malm—285
C_2H_6, I. M. Mills, W. B. Person, J. R. Scherer, and Bryce Crawford, Jr.—851
Cyanate ion, Arthur Maki and J. C. Decius—1003(L)
Cyanide and carbonyl, R. R. Wiederkehr and H. G. Drickamer—311
4-Methoxypyridinium salt, Hiroshi Tsubomura—355(L)
Group VI hexacarbonyls, Alfred Danti and F. Albert Cotton—736(L)
HCl-HBr mixed crystals, G. L. Hiebert and D. F. Hornig—316
Hydrogen, Victor W. Laurie—704
Hydrogen peroxide vapor, Eizi Hirota—839
Liquids, Willis B. Person—319
Methanol vapor, Richard G. Inskeep, James M. Kelliher, Paul E. McMahon, and Bruce G. Somers—1033
Methyl chloride, Robert G. Brown and T. Harvey Edwards—384
Monochloracetic acid, José R. Barceló, M. Pilar Jorge, and Clara Otero—1230
Nickel carbonyl, Llewellyn H. Jones—1215
Nitrogen, F. LeBlanc, Y. Tanaka, and A. Jursa—979(L)
Nitrous oxides, G. M. Begun and W. H. Fletcher—414
Polymer solutions, George R. Bird—1155
Potassium thiocyanate, Llewellyn H. Jones—1234
SF_4, F. A. Cotton, J. W. George, and J. S. Waugh—994(L)
Tetrahedral molecules, C. W. F. T. Pistorius—514(L)
Triethylborane, Walter J. Lehmann, Charles O. Wilson, Jr., and I. Shapiro—777
Tirmethylborane, Walter J. Lehmann, Charles O. Wilson, Jr., and I. Shapiro—781
Microwave of
$CH_2DCH{:}CH_2$, Dudley R. Herschbach and Lawrence C. Krisher—728(L)
Formic acid, Gunnar Erlandsson—71
Formic acid monomer, Ralph Trambarulo, Arthur Clark, and Charles Hearns—736(L)
H_2S, Kimio Ohno, Yukio Mizuno, and Masataka Mizushima—691
Hydrogen, Victor W. Laurie—704
Hydrogen peroxide vapor, Eizi Hirota—839
Methyl difluorosilane, J. D. Swalen and B. P. Stoicheff—671
PH_3, PD_3, DI, and CO, C. A. Burns—427
Trimethylamine, David R. Lide, Jr., and D. E. Mann—572
Of Crystals
α-Quartz, Alvin J. Cohen and Herbert L. Smith—401
$Ca(OH)_4$, W. R. Busing and H. W. Morgan—998(L)
Crystalline anthracene, J. Ferguson and W. G. Schneider—761
Crystalline pyrene, J. Ferguson—765
Cyanate ion, Arthur Maki and J. C. Decius—1003(L)
F centers, Allen B. Scott and Marian E. Hills—24
HCl-HBr mixed crystals, G. L. Hiebert and D. F. Hornig—316
Monochloracetic acid, José R. Barceló, M. Pilar Jorge, and Clara Otero—1230
Potassium thiocyanate, Llewellyn H. Jones—1234
Visible or Ultraviolet of
α-Quartz, Alvin J. Cohen and Herbert L. Smith—401
Benzene, W. W. Robertson and S. E. Babb, Jr.—953
CO_2, CS_2, COS, N_2O, Y. Tanaka, A. S. Jursa, and F. J. LeBlanc—350(L)
Crystalline anthracene, J. Ferguson and W. G. Schneider—761
Crystalline pyrene, J. Ferguson—765
C_6H_6 and H_2, S. M. Bunch, G. R. Cook, M. Ogawa, and A. W. Ehler—740(L)
Dye molecules, Eion G. McRae and Michael Kasha—721(L)
Ethylene oxide, Austin Lowrey, III and K. Watanabe—208
F centers, Allen B. Scott and Marian E. Hills—24
4-Methoxypyridinium salt, Hiroshi Tsubomura—355(L)
H_2SO_4, H. Kon and M. S. Blois, Jr.—743(L)
Hydrogen fluoride, D. F. Smith—1040
HNO, NH, and OH, G. Wilse Robinson and Maclyn McCarty, Jr.—350(L)
Iodine complexes, P. A. D. deMaine—1002(L)
Methyl, ethyl, *n*-propyl, and *n*-butyl alcohols, M. Ogawa and G. R. Cook—747(L)
Molten salts, Benson R. Sundheim and Jacob Greenberg—439
NH_2, G. Wilse Robinson and Maclyn McCarty, Jr.—349(L)
Ni(II) complexes, Gilda Maki—651
NO_3 and N_2O, J. Collin and F. P. Lossing—900
OH, P. J. Dyne—999(L)
$OH\ ^2\pi-^2\Sigma$, Walter E. Kaskan—729(L)
O_2, M. Ogawa and G. R. Cook—173(L)
Oxygen, Joseph A. Golden and Albert L. Myerson—975(L)
Polyenes, cumulenes, and polyynes, Helmut Krauch—898
Small ring hydrocarbons, Barbara B. Loeffler, Elspeth Eberlin, and Lucy W. Pickett—345
Sodium sulfate solutions, H. A. Mahlman—1256(L)
Apparatus and Methods
Application of a high-speed electronic computer in diffusion kinetics, Donald A. Flanders and Hugo Fricke—1126
Evaluation of molecular integrals by digital computer, C. C. J. Roothaan—982(L)
Heat of bulb breaking in heat-of-immersion calorimetry, C. A. Guderjahn, D. A. Paynter, P. E. Berghausen, and R. J. Good—520(L)
Transitions in adsorbed monolayers. I. Experimental, B. B. Fisher and W. G. McMillan—549

Conductance
Determination of the electronic conductivity in silver halides by means of polarization measurements, Bernhard Ilschner—1109
Motion of positive holes in $Li_xMn_{1-x}O$, R. C. Miller and R. R. Heikes—348(L)
Proton conductance in ice, B. E. Conway and J. O'M. Bockris—354(L)
Sulfur: A possible metallic form, H. G. David and S. D. Hamann—1006(L)
Transference experiments on lead and thallous ions in potassium chloride crystals, William J. Fredericks and Allen B. Scott—249

Crystal Growth
Growth of metal whiskers by hydrogen reduction of halides, W. W. Webb and E. F. Riebling—1242
Nucleation of new crystals during electrodeposition, D. A. Vermilyea—717(L)

Crystalline State
Anisotropic color centers in α-quartz. II. Germanium-doped synthetic quartz, Alvin J. Cohen and Herbert L. Smith—401
Chemical determination of the oscillator strength of *F* centers, Allen B. Scott and Marian E. Hills—24
Compression and densities of four solidified hydrocarbons and carbon tetrafluoride at 77°K, John W. Stewart and Ralph I. La Rock—425
Determination of the electronic conductivity in silver halides by means of polarization measurements, Bernhard Ilschner—1109
Determination of the *g* tensor in paramagnetic resonance, John A. Weil and John H. Anderson—864
Diffusion of cobalt and chromium in chromite spinel, R. Sun—290
Drude-model calculation of dispersion forces. III. The fourth-order contribution, W. L. Bade—282
Effect of exchange interaction on the magnetic and thermal properties of copper salts and copper coordination compounds, J. C. Eisenstein—323
Electrical and optical properties of synthetic calcium titanate crystal, A. Linz, Jr., and K. Herrington—824
Evaluation of lattice interactions in or near a cubic crystal, George S. Durham and Barbara A. Soderberg—1201
Free radical statistics, Julius L. Jackson and Elliott W. Montroll—1101
General theory of bimolecular reaction rates in solids and liquids, T. R. Waite—103
Growth of metal whiskers by hydrogen reduction of halides, W. W. Webb and E. F. Riebling—1242
Influence of the crystal-field potential on interionic separation in salts of divalent iron-group ions, N. S. Hush and M. H. L. Pryce—244
Ionization of solid particles, Felix T. Smith—746(L)
Lattice dynamics of hexagonal close-packed metals. II. Frequency spectrum, C. W. Garland and L. J. Slutsky—331
Madelung constants of simple crystals expressed in terms of Born's basic potentials of 15 figures, Yosio Sakamoto—164(L)
Magnetic properties of certain rare earth double nitrates, B. R. Judd and Eugene Wong—1097
Motion of positive holes in $Li_xMn_{1-x}O$, R. C. Miller and R. R. Heikes—348(L)
Nuclear resonance spectrum of Al^{27} in chrysoberyl, John H. Hockenberry, Jr., L. Carlton Brown, and Dudley Williams—367
Nucleation of new crystals during electrodeposition, D. A. Vermilyea—717(L)
Paramagnetic resonance in copper dimethylglyoxime, H. S. Jarrett—1260(L)
Photoconductivity of anthracene. IV. Bulk photoconduction in single crystals, J. Kommandeur and W. G. Schneider—582
Photoconductivity of anthracene. V. Effect of imperfections on the bulk photocurrent, J. Kommandeur and W. G. Schneider—590
Photoconductivity of anthracene. The effect of neutron bombardment, D. M. J. Compton, W. G. Schneider, and T. C. Waddington—741(L)
Propagation of electronic excitation in insulating crystals, R. E. Merrifield—647
Proton conductance in ice, B. E. Conway and J. O'M. Bockris—354(L)
Proton magnetic resonance of the CH_3 group. IV. Calculation of the tunneling frequency and of T_1 in solids, E. O. Stejskal and H. S. Gutowsky—388
Quadrupolar broadened nuclear magnetic resonance of polycrystalline solids, D. E. O'Reilly—1262(L)
Quadrupole coupling of solid cyanogen chloride, P. A. Casabella and P. J. Bray—1182
Self-diffusion of oxygen in uranium dioxide, A. B. Auskern and J. Belle—171(L)
Sulfur: A possible metallic form, H. G. David and S. D. Hamann—1006(L)
Thermodynamics of nonstoichiometric nickel tellurides. I. Heat capacity and thermodynamic functions of the σ phase from 5 to 350°K, E. F. Westrum, Jr., C. Chou, R. E. Machol, and F. Gronvold—497
Transference experiments on lead and thallous ions in potassium chloride crystals, William J. Fredericks and Allen B. Scott—249

Crystal Structure
Crystal and molecular structure of diboron tetrafluoride, B_2F_4, Louis Trefonas and William N. Lipscomb—54
Molecular and crystal structure of B_4H_{10}, F. L. Hirshfeld, K. Eriks, R. E. Dickerson, E. L. Lippert, Jr., and William N. Lipscomb—56
Polarized infrared spectrum of potassium thiocyanate, Llewellyn H. Jones—1234
Spectroscopic study of the monotropic forms of monochloracetic acid, José R. Barceló, M. Pilar Jorge, and Clara Otero—1230

Detonation (see also Shock Waves)
Gaseous detonation. X. Study of reaction zones, John P. Chesick and G. B. Kistiakowsky—956
Stoichiometry, spectra, and mechanism of light emission for diborane-nitric oxide explosions, Walter Roth—668
Theory of detonations. I. Irreversible unimolecular reaction, Joseph O. Hirschfelder and Charles F. Curtiss—1130
Theory of detonations. II. Reversible unimolecular reaction, B. Linder, C. F. Curtiss, and J. O. Hirschfelder—1147

Dielectrics
Analysis of dielectric loss in two urea addition compounds: The hindered single axis polar rotator, John I. Lauritzen, Jr.—118
Electrical and optical properties of synthetic calcium titanate crystal, A. Linz, Jr., and K. Herrington—824
On dielectric saturation in pure polar liquids and their solutions, A. Chelkowski—1249(L)
Theory of the dielectric constant of imperfect gases and dilute solutions, Terrell L. Hill—61

Diffusion
Application of a high-speed electronic computer in diffusion kinetics, Donald A. Flanders and Hugo Fricke—1126
Contribution to the theory of electrodiffusion, Thor A. Bak and W. G. Kauman—509(L)

Diffusion of cobalt and chromium in chromite spinel, R. Sun—290
Ion exchange kinetics. A nonlinear diffusion problem, F. Helfferich and M. S. Plesset—418
Linear phenomenological equations, Richard J. Bearman —662
Self-diffusion of liquids at the freezing point, J. D. Mackenzie and W. B. Hillig—1259(L)
Self-diffusion of oxygen in uranium dioxide, A. B. Auskern and J. Belle—171(L)
Stokes' and Einstein's law for nonuniform viscosity, S. Broersma—1158
Stress-enhanced diffusion in glass. I. Glass under tension and compression, Kenneth B. McAfee, Jr.—218
Stress-enhanced diffusion in glass. II. Glass under shear, Kenneth B. McAfee, Jr.—226
Unlike molecular interactions and properties of gas mixtures, K. P. Srivastava—543

Dipole Moment

Dipole derivative in lithium hydride, W. G. Norris and William Klemperer—749(L)
Electronic structure of some diatomic hydrides, Morris Krauss—1021
Electrostatic model for prediction of shapes of simple covalent molecules and ions, Alan W. Searcy—1237
Restricted rotation parameters from the dipole moments of α,ω-dibromoparaffins, H. J. G. Hayman and I. Eliezer—890
Stark effect from 1.1 to 2.6 millimeters wavelength: PH_3, PD_3, DI, and CO, C. A. Burns—427
Vibrational matrix elements of NO, R. G. Breene, Jr., and M. N. Todd, Jr.—11

Electrochemistry

Adiabatic rate processes at electrodes. I. Energy-charge relationships, N. S. Hush—962
Determination of the faradaic impedance at solid electrodes and the electrodeposition of copper, J. O'M. Bockris and B. E. Conway—707
Electrochemical behavior of the palladium-hydrogen system. I. Potential-determining mechanisms, Sigmund Schuldiner, Gilbert W. Castellan, and James P. Hoare—16
Electrochemical behavior of the palladium-hydrogen system. II. Thermodynamic considerations, Gilbert W. Castellan, James P. Hoare, and Sigmund Schuldiner—20
Electrochemical behavior of the palladium-hydrogen system. III. Gas-charged palladium alloys, James P. Hoare, Sigmund Schuldiner, and Gilbert W. Castellan—22
Irreversible electrochemical processes in membranes. II. Effects of solvent flow, Yonosuke Kobatake—442
Irreversible electrochemical processes of membranes, Yonosuke Kobatake—146
Kinetics of electrodeposition of silver, P. B. Price and D. A. Vermilyea—720(L)
Nucleation of new crystals during electrodeposition, D. A. Vermilyea—717(L)
Thermal membrane potential, Toshio Ikeda—166(L)

Electron Affinity

Antisymmetrized Hückel orbital calculations of ionization potentials and electron affinities of some aromatic hydrocarbons, R. M. Hedges and F. A. Matsen—950
Experimental determination of the electron affinity of fluorine, T. L. Bailey—792

Electron Diffraction

Electron diffraction study of lead tetramethyl, Chi-hsiang Wong and Verner Schomaker—1007
Electron diffraction study of trifluoromethyl iodide, Chi-hsiang Wong and Verner Schomaker—1010
Electron diffraction study on the rotational isomerism in *n*-propyl chloride, Yonezo Morino and Kozo Kuchitsu—175
Molecular structure and internal rotation of hexachloroethane, hexachlorodisilane, and trichloromethyl-trichlorosilane, Yonezo Morino and Eizi Hirota—185

Emission Spectra

Absolute emission intensity of Schumann-Runge radiation from shock heated oxygen, J. Keck, J. Camm, and B. Kivel—723(L)
Emission spectrum of the OH radical in an oxy-acetylene flame, Fred P. Dickey and James M. Hoffman—1253(L)
Evaporation of active species trapped in a solid condensed from "discharged" nitrogen, Herbert P. Broida and Maurice Peyron—725(L)
Infrared emission spectra of $B_2O_3(g)$ and $B_2O_2(g)$, David White, Patrick N. Walsh, and D. E. Mann—508(L)
Isotope effect and structure of the B_2O_2 and B_4O_6 molecules, William J. Taylor—625
Origin of afterglows in mixtures of nitrogen and oxygen, Frederick Kaufman—992(L)
Stoichiometry, spectra, and mechanism of light emission for diborane-nitric oxide explosions, Walter Roth—668
Triplet-singlet emission spectra of solid toluene at 4°K and 77°K and in EPA solution at 77°K, Yoshiya Kanda and H. Sponer—798
Vibrational matrix elements of NO, R. G. Breene, Jr., and M. N. Todd, Jr.—11

Equation of State

Equation of state for water at high pressure, L. Knopoff—1067
Nodal equation of state and phase transitions in fluids Emmanuel Meeron—505(L)
Quantal virial equation for the pressure, W. Byers Brown—522(L)
Virial coefficients for a Lennard-Jones gas, L. H. Nosanow and J. E. Mayer—874

Errata

B-Cl distance in boron trichloride, Carol Spencer and William N. Lipscomb—355(L)
Heats of combustion of some peroxides and the heats of formation of acetate, propionate, and butyrate radicals, I. Jaffe, E. J. Prosen, and M. Szwarc—355(L)
Infrared absorption of gold monocyanide, R. A. Penneman and L. H. Jones—169(L)
Infrared intensities and bond moments in $CO^{16}O^{18}$, David F. Eggers, Jr.—512(L)
Madelung constants of simple crystals expressed in terms of Born's basic potentials of 15 figures, Yosio Sakamoto —733(L)
Madelung's constants of simple crystals expressed in terms of Born's basic potentials of 15 figures [J. Chem. Phys. **28**, 164–5, 733 (1958)], Yosio Sakamoto—1253(L)
Nonresonant absorption of symmetric top molecules. Shape of the nonresonant spectra, George Birnbaum—992(L)
Reinvestigation of the molecular structure of 1,3,5,7-cyclooctatetraene, O. Bastiansen, Lise Hedberg, and Kenneth Hedberg—512(L)
Series expansion of distribution functions in multicomponent fluid systems, Emmanuel Meeron—512(L)
Some two-center overlap integrals with AO's of principal quantum number four [J. Chem. Phys. **28**, 364 (1958)], L. Leifer, F. A. Cotton, and J. R. Leto—1253(L)
Susceptibility and Curie point of magnetically dilute crystals, Robert E. Behringer—733(L)

Field Emission Microscopy

Field emission from mercury whiskers, Robert Gomer—457

Field Emission Microscopy (continued)
Interaction of rare gases with a tungsten surface, Gert Ehrlich, T. W. Hickmott, and F. G. Hudda—977(L)
Surface diffusion of CO on W, Robert Gomer—168(L)

Flames
Emission spectrum of the OH radical in an oxy-acetylene flame, Fred P. Dickey and James M. Hoffman—1253(L)
Spontaneous ignition temperature of fuel-nitric oxide mixtures, H. G. Wolfhard and A. Strasser—172(L)
Stoichiometry, spectra, and mechanism of light emission for diborane-nitric oxide explosions, Walter Roth—668

Fluorescence
Absorption and fluorescence spectra of crystalline pyrene, J. Ferguson—765
Delayed fluorescence of complex molecules in the vapor phase, Richard Williams—577
Transfer of molecular energy between solutes in liquids, J. B. Birks—730(L)
Transfer of molecular energy between solutes in liquids, A. Weinreb—731(L)
Degree of advancement in reactive gas mixtures, Robert L. Potter—893
Delta-function model for short range intermolecular forces. I. Rare gases, Edward A. Mason and Joseph T. Vanderslice—432

Gases
Energy release from discharged monatomic gases trapped at 4°K, G. J. Minkoff and F. I. Scherber—992(L)
Flow of noble gases at low pressures through porous media and capillaries, L. M. Lund and A. S. Berman—363(L)
High-temperature gas viscosities. I. Nitrous oxide and oxygen, C. J. G. Raw and C. P. Ellis—1198
Higher approximations for the transport properties of binary gas mixtures. III. Isotopic thermal diffusion, S. C. Saxena and E. A. Mason—623
Intermolecular potentials of argon, methane, and ethane, Andrew G. De Rocco and J. O. Halford—1152
Liquid-gas infrared intensities, pressure-induced absorption, and the temperature dependence of infrared intensities in liquids, Willis B. Person—319
Nodal equation of state and phase transitions in fluids, Emmanuel Meeron—505(L)
On time smoothing. A model for momentum transport, Marshall Fixman—397
Proton magnetic resonance chemical shift of free (gaseous) and associated (liquid) hydride molecules, W. G. Schneider, H. J. Bernstein, and J. A. Pople—601
Theory of the dielectric constant of imperfect gases and dilute solutions, Terrell L. Hill—61
Thermal conductivities of gases at low pressures. I. Monatomic gases, helium and argon, F. G. Waelbroeck and P. Zuckerbrodt—523(L)
Thermal conductivities of gases at low pressures. II. Rotational relaxation times in hydrogen, F. G. Waelbroeck and P. Zuckerbrodt—524(L)
Thermal conductivity of multicomponent gas mixtures, Edward A. Mason—1000(L)
Unlike molecular interactions and properties of gas mixtures, K. P. Srivastava—543
Vibrational spectra of BBr_3 and BI_3, Tunis Wentink, Jr., and Victor H. Tiensuu—826
Virial coefficients for a Lennard-Jones gas, L. H. Nosanow and J. E. Mayer—874

Glasses
Nature of the glass transition and the glassy state, Julian H. Gibbs and Edmund A. DiMarzio—373
Stress-enhanced diffusion in glass. I. Glass under tension and compression, Kenneth B. McAfee, Jr.—218
Stress-enhanced diffusion in glass. II. Glass under shear, Kenneth B. McAfee, Jr.—226
Structure of sodium metaphosphate glass, George W. Brady—48

High Pressures
Effect of pressure on cyanide and carbonyl spectra in solution, R. R. Wiederkehr and H. G. Drickamer—311
Sulfur: A possible metallic form, H. G. David and S. D. Hamann—1006(L)

Intensities of Spectra
Absorption coefficients of C_6H_6 and H_2 in the vacuum ultraviolet, S. M. Bunch, G. R. Cook, M. Ogawa, and A. W. Ehler—740(L)
Liquid-gas infrared intensities, pressure-induced absorption, and the temperature dependence of infrared intensities in liquids, Willis B. Person—319
Uncertainties in the measurement of the oscillator strength of the ultraviolet bands of OH, P. J. Dyne—999(L)
Vibrational intensities. IX. C_2H_4: Extension and revision, I. M. Mills, W. B. Person, J. R. Scherer, and Bryce Crawford, Jr.—851

Isotope Effects
Characteristic frequencies of triethylborane, Walter J. Lehmann, Charles O. Wilson, Jr., and I. Shapiro—777
Electron spin resonance of N^{15}-nitrobenzene negative ion, Raymond L. Ward and Melvin P. Klein—518(L)
Fractionation of nitrogen and oxygen isotopes between gaseous NO and liquid NOCl, L. B. Yeatts, Jr.—1255(L)
Infrared emission spectra of $B_2O_3(g)$ and $B_2O_2(g)$, David White, Patrick N. Walsh, and D. E. Mann—508(L)
Infrared spectra of the isotopic nitrous oxides, G. M. Begun and W. H. Fletcher—414
Isotope effect and structure of the B_2O_3 and B_4O_6 molecules, William J. Taylor—625
Microwave spectrum of methyl difluorosilane, J. D. Swalen and B. P. Stoicheff—671
Note on the determination of molecular structure from spectroscopic data, Victor W. Laurie—704
Raman spectroscopy in liquid ammonia solutions. Vibrational frequencies and force constants for isotopic species of the borohydride ion having tetrahedral symmetry, Allan R. Emery and Robert C. Taylor—1029
Second-order sum rule for the vibrations of isotopic molecules and the second rule of the mean, Jacob Bigeleisen—694
Separation of boron isotopes. I. Boron trihalide addition compounds, R. M. Healy and A. A. Palko—211
Separation of boron isotopes. II. The BF_3 anisole system, A. A. Palko, R. M. Healy, and L. Landau—214
Spectroscopic study of the monotropic forms of monochloracetic acid, José R. Barceló, M. Pilar Jorge, and Clara Otero—1230

Isotopes
Exchange of radiocobalt between the hexammines of cobalt (II) and cobalt (III) in liquid ammonia, Jack J. Grossman and Clifford S. Garner—268
Hydrogen conversion and exchange reactions in aqueous solutions induced by gamma rays, Harold L. Friedman and Alfred H. Zeltmann—878
Isotopic exchange reactions. III. The system $SiCl_4$-Cl_2, Rolfe H. Herber and A. Wallace Cordes—361(L)
Lead from some stone meteorites, Royal R. Marshall and David C. Hess—1258(L)
Separation of boron isotopes. I. Boron trihalide addition compounds, R. M. Healy and A. A. Palko—211

Separation of boron isotopes. II. The BF_3 anisole system, A. A. Palko, R. M. Healy, and L. Landau—214

Kinetics of Reaction

Absorption and dispersion of sound in chemically reacting fluids, R. M. Mazo—1223
Acceleration of x-ray energized chemical reactions of organic gases by energy transfer from noble gases, R. C. Palmer, D. C. Bardwell, and M. D. Peterson—167(L)
Adiabatic rate processes at electrodes. I. Energy-charge relationships, N. S. Hush—962
Air afterglow and kinetics of some reactions of atomic oxygen, Frederick Kaufman—352(L)
Application of a high-speed electronic computer in diffusion kinetics, Donald A. Flanders and Hugo Fricke—1126
Application of order-disorder concepts to kinetics of diffusionless transitions in solids, J. M. Honig—723(L)
Brownian motion and chemical kinetics, Robert W. Zwanzig—365(L)
Calculation of reaction profiles behind steady-state shock waves. I. Application to detonation waves, Russell E. Duff—1193
Calculation of the energy of activation for some simple reactions. I. Ortho-para hydrogen reaction, E. R. Lippincott and Asa Leifer—769
Chemical effects of photonuclear reactions in the propyl bromides, A. E. Richardson and A. F. Voigt—854
Collisional deactivation of excited cyclooctatetraene molecule, Hideo Yamazaki and Shoji Shida—737(L)
Comment on "Note on a paper by Rothstein," Jerome Rothstein—1252(L)
Contribution to the theory of electrodiffusion, Thor A. Bak and W. G. Kauman—509(L)
Degree of advancement in reactive gas mixtures, Robert L. Potter—893
Diimide-identification and study by mass spectrometry, S. N. Foner and R. L. Hudson—719(L)
Evaporation of active species trapped in a solid condensed from "discharged" nitrogen, Herbert P. Broida and Maurice Peyron—725(L)
Exchange broadening in nuclear magnetic resonance, Jerome Kaplan—278
Exchange of radiocobalt between the hexammines of cobalt (II) and cobalt (III) in liquid ammonia, Jack J. Grossman and Clifford S. Garner—268
Gaseous detonation. X. Study of reaction zones, John P. Chesick and G. B. Kistiakowsky—956
General theory of bimolecular reaction rates in solids and liquids, T. R. Waite—103
Geometrical and structural unimolecular isomerization of *sym*-cyclopropane-d_2, B. S. Rabinovitch, E. W. Schlag, and K. B. Wiberg—504(L)
Hydrogen conversion and exchange reactions in aqueous solutions induced by gamma rays, Harold L. Friedman and Alfred H. Zeltmann—878
Hydrogen→deuterium exchange reaction in α-keratin, R. D. Fraser and T. P. MacRae—1120
Iodine complexes in inert solvents. V. Evidence of consecutive mechanisms for the reaction between iodine and ethanol or methanol, P. A. D. deMaine—1002(L)
Ion exchange kinetics. A nonlinear diffusion problem, F. Helfferich and M. S. Plesset—418
Isotopic exchange reactions. III. The system $SiCl_4$-Cl_2, Rolfe H. Herber and A. Wallace Cordes—361(L)
Kinetic studies of hydroxyl radicals in shock waves. I. The decomposition of water between 2400° and 3200°K, S. H. Bauer, G. L. Schott, and R. E. Duff—1089
Kinetics of electrodeposition of silver, P. B. Price and D. A. Vermilyea—720(L)
Kinetics of gas phase halogenation reactions, Sidney W. Benson and Jerry H. Buss—301
Kinetics of the high-temperature heterogeneous reaction of chlorine and nickel between 1200 and 1700°K, John D. McKinley, Jr., and Kurt E. Shuler—1207
Kinetics of the triiodide equilibrium, Orlo E. Myers—1027
Low-temperature chemisorption of N_2 and CO, Gert Ehrlich, T. W. Hickmott, and F. G. Hudda—506(L)
Lower limit to the rate with which OH radicals react with methylene blue, D. A. Ross and Franklin Hutchinson—745(L)
Mean first passage time for a random walker and its application to chemical kinetics, Shoon Kyung Kim—1057
Measurement of rate constants of fast reactions in a supersonic nozzle, Peter P. Wegener—724(L)
Mercury photosensitized polymerization of acetylene, S. Shida, Z. Kuri, and T. Furuoya—131
Nitrogen pentoxide formation by ionizing radiation, P. Harteck and S. Dondes—975(L)
Note on a paper by Rothstein, George H. Weiss—1251(L)
Origin of afterglows in mixtures of nitrogen and oxygen, Frederick Kaufman—992(L)
Paramagnetic species produced by γ irradiation of organic compounds, B. Smaller and M. S. Matheson—1169
Pyrolysis of mercury dimethyl vapor, R. Srinivasan—895
Radiolysis of CF_4—C_6H_6 systems, Paul Y. Feng and Ljerka Mamula—507(L)
Reaction of CH_4^+ with CH_4, C. D. Wagner, P. A. Wadsworth, and D. P. Stevenson—517(L)
Reaction rates by nuclear magnetic resonance, Harden M. McConnell—430
Reactions of alkoxy radicals. III. Photolysis of methyl-d_3 acetate below 100°C, M. H. J. Wijnen—271
Reactions of alkoxy radicals. IV. Photolysis of methyl-d_3 acetate at high temperatures, M. H. J. Wijnen—939
Reactions of methyl with ethyl radicals, C. A. Heller—1255(L)
Reactions of nitrogen atoms. II. H_2, CO, NH_3, NO, and NO_2, G. B. Kistiakowsky and G. G. Volpi—665
Recombination of atomic oxygen observed by means of the flash spectroscopy of molecular oxygen in the vacuum ultraviolet, Joseph A. Golden and Albert L. Myerson—978(L)
Residual concentration of a daughter substance removed by a bimolecular reaction, Jerome Rothstein—153
Spontaneous ignition temperature of fuel-nitric oxide mixtures, H. G. Wolfhard and A. Strasser—172(L)
Stoichiometry, spectra, and mechanism of light emission for diborane-nitric oxide explosions, Walter Roth—668
Studies in nonequilibrium rate processes. III. The vibrational relaxation of a system of anharmonic oscillators, Norman W. Bazley, Elliott W. Montroll, Robert J. Rubin, and Kurt E. Shuler—700
Theory of detonations. I. Irreversible unimolecular reaction, Joseph O. Hirschfelder and Charles F. Curtiss—1130
Theory of detonations. II. Reversible unimolecular reaction, B. Linder, C. F. Curtiss, and J. O. Hirschfelder—1147
Theory of solutions and the reaction kinetics in nucleophilic substitution, C. R. Mueller—846
Vibrationally excited ground-state nitrogen in active nitrogen, Frederick Kaufman and John R. Kelso—510(L)

Light Scattering

Light scattering and statistical shape of streaming freely flexible linear macromolecules, Anton Peterlin, Wilfried Heller, and Masayuki Nakagaki—470
Theory of dilute polymer solution. I. Excluded volume effect, Michio Kurata, Hiromi Yamakawa, and Ei Teramoto—785

Liquids

Absorption spectra of molten salts, Benson R. Sundheim and Jacob Greenberg—439
Dielectric saturation in pure polar liquids and their solutions, A. Chelkowski—1249(L)
Dispersion and absorption of sound in ethyl formate and study of the rotational isomers, Daisaku Tabuchi—1014
Equation of state for water at high pressure, L. Knopoff—1067
General theory of bimolecular reaction rates in solids and liquids, T. R. Waite—103
Holes and cells in liquids, Terrell L. Hill—1179
Liquid pair distribution, G. H. A. Cole—912
Liquid-gas infrared intensities, pressure-induced absorption, and the temperature dependence of infrared intensities in liquids, Willis B. Person—319
New method of measuring the two relaxation times of a viscosity liquid, Ali Abdel Kerim Ibrahim—1264(L)
Nodal equation of state and phase transitions in fluids, Emmanuel Meeron—505(L)
Phase changes and spectral shifts, W. W. Robertson and S. E. Babb, Jr.—953
Proton magnetic resonance chemical shift of free (gaseous) and associated (liquid) hydride molecules, W. G. Schneider, H. J. Bernstein, and J. A. Pople—601
Self-diffusion of liquids at the freezing point, J. D. Mackenzie and W. B. Hillig—1259(L)
Sonic velocity in liquid paraffins, Herman I. Leon—748(L)
Specific heat of liquid ozone, Robert I. Brabets and Thomas E. Waterman—1212
Transfer of molecular energy between solutes in liquids, J. B. Birks—730(L)
Transfer of molecular energy between solutes in liquids, A. Weinreb—731(L)
Viscous flow of liquids at constant volume and constant pressure, J. D. MacKenzie—1037
Vibrational spectra of BBr_3 and BI_3, Tunis Wentink, Jr., and Victor H. Tiensuu—826

Magnetic Resonance

Carbonaceous free radicals in crude petroleum, H. S. Gutowsky, B. Roger Ray, R. L. Rutledge, and R. R. Unterberger—744(L)
Comments on "Theory of isotropic hyperfine interactions in π-electron radicals," Harden M. McConnell and Richard E. Robertson—991(L)
Determination of the g tensor in paramagnetic resonance, John A. Weil and John H. Anderson—864
Effect of environment on the fluorine magnetic resonance in solutions of potassium fluoride, Alan Carrington and Theodore Hines—727(L)
Electron spin resonance observations of photochromic substances, Yehuda Hirshberg and S. I. Weissman—739(L)
Electron spin resonance of nitrogen atoms trapped at liquid helium temperature, S. N. Foner, C. K. Jen, E. L. Cochran, and V. A. Bowers—351(L)
Electron spin resonance of N^{15}-nitrobenzene negative ion, Raymond L. Ward and Melvin P. Klein—518(L)
Electron spin resonance spectrum of the electrical discharge products of ammonia frozen at 4.2°K, Terry Cole and John T. Harding—993(L)
Exchange broadening in nuclear magnetic resonance, Jerome Kaplan—278
Fine structure in the electron spin resonance spectra of NO_2 solutions, G. R. Bird, J. C. Baird, and R. B. Williams—738(L)
High-resolution NMR spectrum of liquid propane, P. T. Narasimhan, N. Laine, and Max T. Rogers—1257(L)
Ionization of strong electrolytes. VI. Nuclear magnetic resonance and dissociation of heptafluorobutyric acid, G. C. Hood and C. A. Reilly—329
Kinetics of the triiodide equilibrium, Orlo E. Myers—1027
Magnetic properties of certain rare earth double nitrates, B. R. Judd and Eugene Wong—1097
Motional corrections to distances derived from NMR data: NH_4Cl, NH_4F, and $N_2H_6F_2$, James A. Ibers and D. P. Stevenson—929
NMR chemical shifts of PB^{207} in a few compounds, L. H. Piette and H. E. Weaver—735(L)
Nuclear resonance spectrum and structure of SF_4, F. A. Cotton, J. W. George, and J. S. Waugh—994(L)
Nuclear resonance spectrum of Al^{27} in chrysoberyl, John H. Hockenberry, Jr., L. Carlton Brown, and Dudley Williams—367
Paramagnetic resonance in copper dimethylglyoxime, H. S. Jarrett—1260(L)
Paramagnetic resonance spectra of some semiquinone free radicals, M. Adams, M. S. Blois, Jr., and R. H. Sands—774
Paramagnetic species produced by γ irradiation of organic compounds, B. Smaller and M. S. Matheson—1169
Paramagnetism of hydrocarbon-conc. H_2SO_4 systems, H. Kon and M. S. Blois, Jr.—743(L)
Particle size effect on nuclear spin lattice relaxation time, D. A. Jennings and W. H. Tanttila—976(L)
Proton magnetic resonance chemical shift of free (gaseous) and associated (liquid) hydride molecules, W. G. Schneider, H. J. Bernstein, and J. A. Pople—601
Proton magnetic resonance of the CH_3 group. IV. Calculation of the tunneling frequency and of T_1 in solids, E. O. Stejskal and H. S. Gutowsky—388
Proton magnetic resonance studies of the acetic acid, phenol, and water in mixtures with pyridine, Koichi Toyoda, Tsuneo Ikenoue, and Taro Isobe—356(L)
Proton resonance shifts in paramagnetic metal aromatic complexes, Harden M. McConnell and C. H. Holm—749(L)
Quadrupolar broadened nuclear magnetic resonance of polycrystalline solids, D. E. O'Reilly—1262(L)
Reaction rates by nuclear magnetic resonance, Harden M. McConnell—430
Relative signs of spin-spin interactions in nuclear magnetic resonance, S. Alexander—358(L)
Spin densities in the perinaphthenyl free radical, Harden M. McConnell and Henry H. Dearman—51
Spin density matrices for paramagnetic molecules, Harden M. McConnell—1188
Stokes' and Einstein's law for nonuniform viscosity, S. Broersma—1158
Theory of isotropic hyperfine interactions in π-electron radicals, Harden M. McConnell and Donald B. Chesnut—107

Magnetic Susceptibilities

Diamagnetic anisotropy of benzene, Peter G. Lykos and Robert G. Parr—361(L)
Effect of exchange interaction on the magnetic and thermal properties of copper salts and copper coordination compounds, J. C. Eisenstein—323
Heat capacities of CrF_3 and $CrCl_3$ from 15 to 300°K, Wilford N. Hansen and Maurice Griffel—902
Ligand field theory of Ni(II) complexes. I. Electronic energies and singlet ground-state conditions of Ni(II) complexes of different symmetries, Gilda Maki—651

Paramagnetic susceptibility of conduction electrons, T. Tietz—1261(L)
Paramagnetism in diamagnetic molecules, William Weltner, Jr.—447

Mass Spectra

Charge permutation by ion-molecule collision, C. E. Melton—359(L)
Determination of relative partial pressures from mass spectrometer ion intensity measurements, Thomas A. Milne—717(L)
Diimide-identification and study by mass spectrometry, S. N. Foner and R. L. Hudson—719(L)
Experimental determination of the electron affinity of fluorine, T. L. Bailey—792
Fragmentation of methane by electron impact and the latent heat of sublimation of carbon, J. D. Morrison and H. E. Stanton—9
Gaseous species in the vaporization of sodium and potassium hydroxide, Richard F. Porter and Richard C. Schoonmaker—168(L)
Gaseous species in the vaporization of sodium hydroxide, Richard C. Schoonmaker and Richard F. Porter—454
Ionization and dissociation of NO_2 and N_2O by electron impact, J. Collin and F. P. Lossing—900
Lead from some stone meteorites, Royal R. Marshall and David C. Hess—1258(L)
Mass spectra rearrangements of 2-phenyl alcohols, J. A. Gilpin—521(L)
Mass spectrometer analysis of the vapor in equilibrium with the alkali-metal chlorides, Thomas A. Milne, H. Michael Klein, and Daniel Cubicciotti—718(L)
Negative ion formation in N_2O and in NO by electron impact, Bruce E. Knox and Benjamin P. Burtt—1256(L)
Photon impact studies of molecules using a mass spectrometer, H. Hurzeler, Mark G. Inghram, and J. D. Morrison—76
Reaction of CH_4^+ with CH_4, C. D. Wagner, P. A. Wadsworth, and D. P. Stevenson—517(L)
Reactions of nitrogen atoms. II. H_2, CO, NH_3, NO, and NO_2, G. B. Kistiakowsky and G. G. Volpi—665
Vibrationally excited ground-state nitrogen in active nitrogen, Frederick Kaufman and John R. Kelso—510(L)

Mechanics, Quantum

Antisymmetrized Hückel orbital calculations of ionization potentials and electron affinities of some aromatic hydrocarbons, R. M. Hedges and F. A. Matsen—950
Application of the method of deformed atoms in molecules to the Li_2 molecule, Tadashi Arai and Michiko Sakamoto—32
Application of the Pariser and Parr method to dye ions with amidinium resonance, Sean P. McGlynn and William T. Simpson—297
Calculation of atomic valence state energies, Audrey L. Companion and Frank O. Ellison—1
Calculation of the energy of activation for some simple reactions. I. Ortho-para hydrogen reaction, E. R. Lippincott and Asa Leifer—769
Characteristic exponent for the radial wave equation with a Maxwellian potential, E. Drauglis and B. Widom—309
Chemical bond. II. A one-dimensional approach to the energetics and ionic character, Gordon M. Barrow—485
Comments on "Note on the He-He interaction potential and its determination from Amdur's scattering measurements," I. Amdur—987(L)
Comments on "Theory of isotropic hyperfine interactions in π-electron radicals," Harden M. McConnell and Richard E. Robertson—991(L)
Computation of certain multicentered molecular integrals, James W. Richardson—362(L)
Configuration interaction study of the electronic structure of the OH radical by the atomic and molecular orbital methods, A. J. Freeman—230
Consolidated variation perturbation theory, H. Shull and W. T. Simpson—925
Dependence of force constant on electronegativity, bond strength and bond order. VII, G. R. Somayajulu—814
Diamagnetic anisotropy of benzene, Peter G. Lykos and Robert G. Parr—361(L)
Discussion of slater parameters for elements of the first long period, David A. Brown—67
Dynamical stability criteria for molecular motions, Andrew D. Liehr and Harry L. Frisch—1116
Electronic structure of some diatomic hydrides, Morris Krauss—1021
Electronic structures of the methyl radical: Effect of 3*s* atomic orbital of carbon, Jiro Higuchi—527
Energy of interaction between two excited hydrogen atoms in either 2*s* or 2*p* states, Bruno Linder and Joseph O. Hirschfelder—197
Evaluation of molecular integrals by digital computer, C. C. J. Roothaan—982(L)
Excited states of H^-, B. F. Gray and H. O. Pritchard—519(L)
Floating wave functions for H_2^+ and H_2, Harrison Shull and Darrell D. Ebbing—866
Formal Hückel theory, William T. Simpson—972
Hfs of the H_2S molecule and its electronic structure, Kimio Ohno, Yukio Mizuno, and Masataka Mizushima—691
Improved molecular orbitals (Computations on H_2), P. E. Phillipson and R. S. Mulliken—1248(L)
Influence of the crystal-field potential on interionic separation in salts of divalent iron-group ions, N. S. Hush and M. H. L. Pryce—244
Interaction energy and scattering cross sections of H^- ions in helium, Edward A. Mason and Joseph T. Vanderslice—253
Ligand field theory of Ni(II) complexes. I. Electronic energies and singlet ground-state conditions of Ni(II) complexes of different symmetries, Gilda Maki—651
Magnetic properties of certain rare earth double nitrates, B. R. Judd and Eugene Wong—1097
Molecular orbitals in the $B_4H_7^-$ and $B_6H_{11}^+$ ions, William N. Lipscomb—170(L)
Note on the approximation of two-center exchange integrals, P. Csavinszky—996(L)
Note on the He-He interaction potential and its determination from Amdur's scattering measurements, Ta-You Wu—986(L)
Nuclear quadrupole coupling in the Li_3 molecule, Isao Mannari and Tadashi Arai—28
One-center wave function of the hydrogen molecule, Hubert W. Joy and Robert G. Parr—448
Open-shell energies of lithium-like ions, E. A. Burke and J. F. Mulligan—995(L)
Origin of interaction terms in molecular vibrations, Louis Burnelle and Jules Duchesne—726(L)
Out-of-plane vibrations of a conjugated hydrocarbon: *trans*-butadiene, Tosinobu Anno—944
Paramagnetic resonance in copper dimethylglyoxime, H. S. Jarrett—1260(L)
Propagation of electronic excitation in insulating crystals, R. E. Merrifield—647
Quantal virial equation for the pressure, W. Byers Brown—522(L)
Quantum mechanics of the H_3 complex, George E. Kimball and John G. Trulio—493
Resonance in sterically hindered aromatic molecules, F. J. Adrian—608

Mechanics, Quantum (continued)

Role of atomic valence states in molecular energy calculations, A. C. Hurley—532

Some comments on perturbation theory, B. F. Gray—732(L)

Some extraordinary functions for improving calculations of electronic energies, Lawrence C. Snyder and Robert G. Parr—1250(L)

Some two-center overlap integrals with AO's of principal quantum number four, L. Leifer, F. A. Cotton, and J. R. Leto—364(L)

Spectral comparison of polyenes, cumulenes, and polyynes, Helmut Krauch—898

Spin densities in the perinaphthenyl free radical, Harden M. McConnell and Henry H. Dearman—51

Spin density matrices for paramagnetic molecules, Harden M. McConnell—1188

Theory of isotropic hyperfine interactions in π-electron radicals, Harden M. McConnell and Donald B. Chesnut—107

Theory of separated electron pairs, Joe M. Parks and Robert G. Parr—335

Time reversal symmetry and electromagnetic polarization fields, Robert A. Satten—742(L)

Mechanics, Statistical

Absorption and dispersion of sound in chemically reacting fluids, R. M. Mazo—1223

Brownian motion and chemical kinetics, Robert W. Zwanzig—365(L)

Bulk viscosity and shear viscosity in fluids according to the theory of irreversible processes, Karl F. Herzfeld—595

Chain configurations of polymers and polyelectrolytes, Michael E. Fisher—756

Chain stiffness and the lattice theory of polymer phases, E. A. DiMarzio and J. H. Gibbs—807

Equation of state for water at high pressure, L. Knopoff—1067

Free radical statistics, Julius L. Jackson and Elliott W. Montroll—1101

Higher approximations for the transport properties of binary gas mixtures. III. Isotopic thermal diffusion, S. C. Saxena and E. A. Mason—623

Holes and cells in liquids, Terrell L. Hill—1179

Intermolecular potentials of argon, methane, and ethane, Andrew G. De Rocco and J. O. Halford—1152

Liquid pair distribution, G. H. A. Cole—912

Mean first passage time for a random walker and its application to chemical kinetics, Shoon Kyung Kim—1057

Nature of the glass transition and the glassy state, Julian H. Gibbs and Edmund A. DiMarzio—373

Nodal equation of state and phase transitions in fluids, Emmanuel Meeron—505(L)

On time smoothing. A model for momentum transport, Marshall Fixman—397

Quantal virial equation for the pressure, W. Byers Brown—522(L)

Relaxation of the string oscillator, B. Widom—918

Statistical mechanics of transport processes. XI. Equations of transport in multicomponent systems, Richard J. Bearman and John G. Kirkwood—136

Statistical thermodynamics of quantum fluids, R. M. Mazo and J. G. Kirkwood—644

Statistics of polymer molecular size distribution for an invariant number of propagating chains, Louis Gold—91

Studies in nonequilibrium rate processes. III. The vibrational relaxation of a system of anharmonic oscillators, Norman W. Bazley, Elliott W. Montroll, Robert J. Rubin, and Kurt E. Shuler—700

Theory of dilute high-polymer solutions, D. K. Carpenter and W. R. Krigbaum—513(L)

Theory of dilute polymer solution. I. Excluded volume effect, Michio Kurata, Hiromi Yamakawa, and Ei Teramoto—785

Theory of helix-coil transitions in polypeptides, J. H. Gibbs and E. A. DiMarzio—1247(L)

Theory of potentials of average force and radial distribution functions in ionic solutions, Emmanuel Meeron—630

Theory of solutions and the reaction kinetics in nucleophilic substitution, C. R. Mueller—846

Theory of the one-dimensional phase transition in polypeptide chains, B. H. Zimm and J. K. Bragg—1246(L)

Theory of the dielectric constant of imperfect gases and dilute solutions, Terrell L. Hill—61

Thermal conductivity of multicomponent gas mixtures, Edward A. Mason—1000(L)

Transitions in adsorbed monolayers. II. Theoretical, B. B. Fisher and W. G. McMillan—555

Transitions in adsorbed monolayers. III. Results and comparisons, B. B. Fisher and W. G. McMillan—562

Virial coefficients for a Lennard-Jones gas, L. H. Nosanow and J. E. Mayer—874

Metals

Field emission from mercury whiskers, Robert Gomer—457

Growth of metal whiskers by hydrogen reduction of halides, W. W. Webb and E. F. Riebling—1242

Lattice dynamics of hexagonal close-packed metals. II. Frequency spectrum, C. W. Garland and L. J. Slutsky—331

Paramagnetic susceptibility of conduction electrons, T. Tietz—1261(L)

Self-diffusion of liquids at the freezing point, J. D. Mackenzie and W. B. Hillig—1259(L)

Sulfur: A possible metallic form, H. G. David and S. D. Hamann—1006(L)

Molecular Structure and Constants (see also Absorption Spectra, Fluorescence, Raman Spectra, Electron and X-Ray Diffraction)

Absorption and ionization coefficients of ethylene oxide, Austin Lowrey, III, and K. Watanabe—208

Analysis of dielectric loss in two urea addition compounds: The hindered single axis polar rotator, John I. Lauritzen, Jr.—118

Characteristic frequencies of triethylborane, Walter J. Lehmann, Charles O. Wilson, Jr., and I. Shapiro—777

Characteristic frequencies of trimethylborane, Walter J. Lehmann, Charles O. Wilson, Jr., and I. Shapiro—781

Comment on "Evidence for the normal cyanide structure of $(CH_3)_3SiCN$," Harold C. Beachell—991(L)

Correlation of molecular constants. I. Deduction of relations, Yatendra Pal Varshni—1078

Correlation of molecular constants. II. Relation between force constant and equilibrium internuclear distance, Yatendra Pal Varshni—1081

Crystal and molecular structure of diboron tetrafluoride, B_2F_4, Louis Trefonas and William N. Lipscomb—54

Dependence of force constant on electronegativity, bond strength and bond order. VII, G. R. Somayajulu—814

Dipole derivative in lithium hydride, W. G. Norris and William Klemperer—749(L)

Dynamical stability criteria for molecular motions, Andrew D. Liehr and Harry L. Frisch—1116

Electron diffraction study of lead tetramethyl, Chi-hsiang Wong and Verner Schomaker—1007

Electron diffraction study of trifluoromethyl iodide, Chi-hsiang Wong and Verner Schomaker—1010

Electron diffraction study on the rotational isomerism in *n*-propyl chloride, Yonezo Morino and Kozo Kuchitsu—175

Electrostatic model for prediction of shapes of simple covalent molecules and ions, Alan W. Searcy—1237
Entropies of some diatomic and polyatomic ions, A. P. Altshuller—1254(L)
Evidence for the normal cyanide structure of $(CH_3)_3SiCN$, H. Richard Linton and Eugene R. Nixon—990(L)
Far ultraviolet absorption spectra of small ring hydrocarbons, Barbara B. Loeffler, Elspeth Eberlin, and Lucy W. Pickett—345
Force constants of tetrahedral molecules, C. W. F. T. Pistorius—514(L)
Geometrical and structural unimolecular isomerization of *sym*-cyclopropane-d_2, B. S. Rabinovitch, E. W. Schlag, and K. B. Wiberg—504(L)
Hfs of the H_3S molecule and its electronic structure, Kimio Ohno, Yukio Mizuno, and Masataka Mizushima—691
High-resolution NMR spectrum of liquid propane, P. T. Narasimhan, N. Laine, and Max T. Rogers—1257(L)
Hydrogen fluoride polymer spectrum, hexamer and tetramer, D. F. Smith—1040
Hydrogen→deuterium exchange reaction in α-keratin, R. D. Fraser and T. P. MacRae—1120
Infrared absorption spectra of chromyl fluoride and chromyl chloride, Willard Earl Hobbs—1220
Infrared emission spectra of $B_2O_3(g)$ and $B_2O_2(g)$, David White, Patrick N. Walsh, and D. E. Mann—508(L)
Infrared spectra of the isotopic nitrous oxides, G. M. Begun and W. H. Fletcher—414
Infrared spectrum of antimony trichloride-benzene complex, L. W. Daasch—1005(L)
Infrared spectrum of cyanate ion as a solid solution in a potassium iodide lattice, Arthur Maki and J. C. Decius—1005(L)
Infrared spectrum of methyl chloride near 6000 cm^{-1}, Robert G. Brown and T. Harvey Edwards—384
Internuclear distance and *l*-type doubling in carbon disulfide, A. H. Guenther, T. A. Wiggins, and D. H. Rank—682
Ionization and dissociation of NO_2 and N_2O by electron impact, J. Collin and F. P. Lossing—900
Isotope effect and structure of the B_2O_3 and B_4O_6 molecules, William J. Taylor—625
Length of the single bond between trigonally hybridized carbon atoms, Denys Cook—1001(L)
Mass spectra rearrangements of 2-phenyl alcohols, J. A. Gilpin—521(L)
Mg-N bond length in chlorophyll, Leonard S. Levitt—515(L)
Microwave spectra of molecules exhibiting internal rotation. III. Trimethylamine, David R. Lide, Jr., and D. E. Mann—572
Microwave spectrum of $CH_2DCH{:}CH_2$; equilibrium conformation of propylene, Dudley R. Herschbach and Lawrence C. Krisher—728(L)
Microwave spectrum of methyl difluorosilane, J. D. Swalen and B. P. Stoicheff—671
Millimeter-wave spectrum of formic acid, Gunnar Erlandsson—71
Molecular and crystal structure of B_6H_{10}, F. L. Hirshfeld, K. Eriks, R. E. Dickerson, E. L. Lippert, Jr., and William N. Lipscomb—56
Molecular association of methanol vapor, Richard G. Inskeep, James M. Kelliher, Paul E. McMahon, and Bruce G. Somers—1033
Molecular structure and internal rotation of hexachloroethane, hexachlorodisilane, and trichloromethyl-trichlorosilane, Yonezo Morino and Eizi Hirota—185
Motional corrections to distances derived from NMR data: NH_4Cl, NH_4F, and $N_2H_6F_2$, James A. Ibers and D. P. Stevenson—929
Normal frequencies of bipyramidal $M(XY)_5$ molecules, Hiromu Murata and Kiyoyasu Kawai—516(L)
Note on the determination of molecular structure from spectroscopic data, Victor W. Laurie—704
Nuclear quadrupole coupling in the Li_2 molecule, Isao Mannari and Tadashi Arai—28
Nuclear resonance spectrum and structure of SF_4, F. A. Cotton, J. W. George, and J. S. Waugh—994(L)
Out-of-plane vibrations of a conjugated hydrocarbon: *trans*-butadiene, Tosinobu Anno—944
Paramagnetic resonance in copper dimethylglyoxime, H. S. Jarrett—1260(L)
Paramagnetism in diamagnetic molecules, William Weltner, Jr.—447
Photon impact studies of molecules using a mass spectrometer, H. Hurzeler, Mark G. Inghram, and J. D. Morrison—76
Planarity of the formic acid monomer, Ralph Trambarulo, Arthur Clark, and Charles Hearns—736(L)
Polarized infrared spectrum of potassium thiocyanate, Llewellyn H. Jones—1234
Polymerization of alkali halides, P. Kusch—981(L)
Quadrupole coupling of solid cyanogen chloride, P. A. Casabella and P. J. Bray—1182
Raman spectra of group VI hexacarbonyls, Alfred Danti and F. Albert Cotton—736(L)
Raman spectroscopy in liquid ammonia solutions. Vibrational frequencies and force constants for isotopic species of the borohydride ion having tetrahedral symmetry, Allan R. Emery and Robert C. Taylor—1029
Relative detection efficiency of LiBr and $(LiBr)_2$, P. Kusch—1075
Resonance in sterically hindered aromatic molecules, F. J. Adrian—608
Rotational structure of the infrared absorption spectrum of hydrogen peroxide vapor, Eizi Hirota—839
Soft x-ray absorption edges of metal ions in complexes. III. Zinc (II) complexes, F. Albert Cotton and Harold P. Hanson—83
Spectroscopic study of the monotropic forms of monochloracetic acid, José R. Barceló, M. Pilar Jorge, and Clara Otero—1230
Stark effect from 1.1 to 2.6 millimeters wavelength: PH_3, PD_3, DI, and CO, C. A. Burns—427
Streaming dichroism in polymer solutions: The calculation of results, George R. Bird—1155
Structure of CH_2, G. A. Gallup—1252(L)
Structure of CH_2, B. F. Gray—1252(L)
Theory of helix-coil transitions in polypeptides, J. H. Gibbs and E. A. DiMarzio—1247(L)
Theory of the one-dimensional phase transition in polypeptide chains, B. H. Zimm and J. K. Bragg—1246(L)
Vibrational spectra and thermodynamic properties of ClF_3 and BrF_3, Howard H. Claassen, Bernard Weinstock, and John G. Malm—285
Vibrational spectra of BBr_3 and BI_3, Tunis Wentink, Jr., and Victor H. Tiensuu—826
Vibrational spectrum of nickel carbonyl, Llewellyn H. Jones—1215

Nuclear Quadrupole Resonance

Pure quadrupole resonance determinations of molecular charge distributions. I. Substituted quinones, quinolines, pyridines, pyrimidines, and triazines, P. J. Bray, Saul Moskowitz, H. O. Hooper, R. G. Barnes, and S. L. Segel—99
Quadrupole coupling of solid cyanogen chloride, P. A. Casabella and P. J. Bray—1182

Phase Transitions

Application of order-disorder concepts to kinetics of diffusionless transitions in solids, J. M. Honig—723(L)
"Deposition"—a proposed antonym for "sublimation," James E. McDonald—170(L)
Phase changes and spectral shifts, W. W. Robertson and S. E. Babb, Jr.—953
Theory of helix-coil transitions in polypeptides, J. N. Gibbs and E. A. DiMarzio—1247(L)
Theory of the one-dimensional phase transition in polypeptide chains, B. H. Zimm and J. K. Bragg—1246(L)

Phosphors

Enhancement of phosphorescence ability upon aggregation of dye molecules, Eion G. McRae and Michael Kasha—721(L)
Triplet-singlet emission spectra of solid toluene at 4°K and 77°K and in EPA solution at 77°K, Yoshiya Kanda and H. Sponer—798

Photochemistry

Collisional deactivation of excited cyclooctatetraene molecule, Hideo Yamazaki and Shoji Shida—737(L)
Electron spin resonance observations of photochromic substances, Yehuda Hirshberg and S. I. Weissman—739(L)
Mercury photosensitized polymerization of acetylene, S. Shida, Z. Kuri, and T. Furuoya—131
Mg—N bond length in chlorophyll, Leonard S. Levitt—515(L)
Reactions of alkoyl radicals. III. Photolysis of methyl-d_3 acetate below 100°C, M. H. J. Wijnen—271
Reactions of alkoxy radicals. IV. Photolysis of methyl-d_3 acetate at high temperatures, M. H. J. Wijnen—939

Photoconductivity

Photoconductivity of anthracene. IV. Bulk photoconduction in single crystals, J. Kommandeur and W. G. Schneider—582
Photoconductivity of anthracene. V. Effect of imperfections on the bulk photocurrent, J. Kommandeur and W. G. Schneider—590
Photoconductivity of anthracene. The effect of neutron bombardment, D. M. J. Compton, W. G. Schneider, and T. C. Waddington—741(L)
Photodesorption in zinc oxide semiconductor, D. B. Medved—870

Polymers

Acceleration of x-ray energized chemical reactions of organic gases by energy transfer from noble gases, R. C. Palmer, D. C. Bardwell, and M. D. Peterson—167(L)
Chain configurations of polymers and polyelectrolytes, Michael E. Fisher—756
Chain stiffness and the lattice theory of polymer phases, E. A. DiMarzio and J. H. Gibbs—807
Comments on the paper "Potentiometric titration, association phenomena, and interaction of neighboring groups in polyelectrolytes," Stuart A. Rice and Frank E. Harris—988(L)
Hydrogen fluoride polymer spectrum, hexamer and tetramer, D. F. Smith—1040
Interpretation of infrared dichroism in axially oriented polymers, R. D. B. Fraser—1113
Light scattering and statistical shape of streaming freely flexible linear macromolecules, Anton Peterlin, Wilfried Heller, and Masayuki Nakagaki—470
Mercury photosensitized polymerization of acetylene, S. Shida, Z. Kuri, and T. Furuoya—131
On ion-pair formation in polyelectrolytes, Shneior Lifson—989(L)
Restricted rotation parameters from the dipole moments of α,ω-dibromoparaffins, H. J. G. Hayman and I. Eliezer—890
Statistics of polymer molecular size distribution for an invariant number of propagating chains, Louis Gold—91
Streaming dichroism in polymer solutions: The calculation of results, George R. Bird—1155
Structure of sodium metaphosphate glass, George W. Brady—48
Theory of dilute high-polymer solutions, D. K. Carpenter and W. R. Krigbaum—513(L)
Theory of dilute polymer solution. I. Excluded volume effect, Michio Kurata, Hiromi Yamakawa, and Ei Teramoto—785
Theory of helix-coil transitions in polypeptides, J. H. Gibbs and E. A. DiMarzio—1247(L)
Theory of the one-dimensional phase transition in polypeptide chains, B. H. Zimm and J. K. Bragg—1246(L)
Viscosity of dilute solutions of long chain polymer molecules, H. L. Bhatnagar, A. B. Biswas, and M. K. Gharpurey—88

Proteins

Hydrogen→deuterium exchange reaction in α-keratin, R. D. Fraser and T. P. MacRae—1120

Radiation Chemistry

Acceleration of x-ray energized chemical reactions of organic gases by energy transfer from noble gases, R. C. Palmer, D. C. Bardwell, and M. D. Peterson—167(L)
Application of a high-speed electronic computer in diffusion kinetics, Donald A. Flanders and Hugo Fricke—1126
Chemical effects of photonuclear reactions in the propyl bromides, A. E. Richardson and A. F. Voigt—854
Hydrogen conversion and exchange reactions in aqueous solutions indiced by gamma rays, Harold L. Friedman and Alfred H. Zeltmann—878
Hydrogen formation in concentrated aqueous sodium sulfate solutions by cobalt-60 gamma-ray radiation H. A. Mahlman—1256(L)
Negative ion formation in N_2O and in NO by electron impact, Bruce E. Knox and Benjamin P. Burtt—1256(L)
Nitrogen pentoxide formation by ionizing radiation, P. Harteck and S. Dondes—975(L)
Paramagnetic species produced by γ irradiation of organic compounds, B. Smaller and M. S. Matheson—1169
Radiation chemistry of cyclohexane, A. C. Nixon and R. E. Thorpe—1004(L)
Radiolysis of $CF_4-C_4H_8$ systems, Paul Y. Feng and Ljerka Mamula—507(L)

Raman Spectra

Characteristic frequencies of triethylborane, Walter J. Lehmann, Charles O. Wilson, Jr., and I. Shapiro—777
Force constants of tetrahedral molecules, C. W. F. T. Pistorius—514(L)
Note on the determination of molecular structure from spectroscopic data, Victor W. Laurie—704
Raman spectra of group VI hexacarbonyls, Alfred Danti and F. Albert Cotton—736(L)
Raman spectroscopy in liquid ammonia solutions. Vibrational frequencies and force constants for isotopic species of the borohydride ion having tetrahedral symmetry, Allan R. Emery and Robert C. Taylor—1029
Vibrational spectra and thermodynamic properties of ClF_3 and BrF_3, Howard H. Claassen, Bernard Weinstock, and John G. Malm—285

Rotation

Gaseous detonation. X. Study of reaction zones, John P. Chesick and G. B. Kistiakowsky—956

Microwave spectrum of $CH_2DCH:CH_2$; equilibrium conformation of propylene, Dudley R. Herschbach and Lawrence C. Krisher—728(L)
Molecular structure and internal rotation of hexachloroethane, hexachlorodisilane, and trichloromethyl-trichlorosilane, Yonezo Morino and Eizi Hirota—185
Proton magnetic resonance of the CH_3 group. IV. Calculation of the tunneling frequency and of T_1 in solids, E. O. Stejskal and H. S. Gutowsky—388
Restricted rotation parameters from the dipole moments of α,ω-dibromoparaffins, H. J. G. Hayman and I. Eliezer—890
Rotational structure of the infrared absorption spectrum of hydrogen peroxide vapor, Eizi Hirota—839
Thermal conductivities of gases at low pressures. II. Rotational relaxation times in hydrogen, F. G. Waelbroeck and P. Zuckerbrodt—524(L)

Rotational Isomerism

Dispersion and absorption of sound in ethyl formate and study of the rotational isomers, Daisaku Tabuchi—1014
Electron diffraction study on the rotational isomerism in *n*-propyl chloride, Yonezo Morino and Kozo Kuchitsu—175

Scattering

Comments on "Note on the He-He interaction potential and its determination from Amdur's scattering measurements," I. Amdur—987(L)
Elastic and inelastic scattering of low-velocity ions: He^+ in Ne, Ne^+ in He, and Ne^+ in Ne, W. H. Cramer—688
Interaction energy and scattering cross sections of H^- ions in helium, Edward A. Mason and Joseph T. Vanderslice—253
Interactions of H^- ions and H atoms with Ne, Ar, and H_2, Edward A. Mason and Joseph T. Vanderslice—1070
Note on the He-He interaction potential and its determination from Amdur's scattering measurements, Ta-You Wu—986(L)

Semiconductors

Photodesorption in zinc oxide semiconductor, D. B. Medved—870
Sulfur: A possible metallic form, H. G. David and S. D. Hamann—1006(L)

Shock Waves (see also Detonation)

Absolute emission intensity of Schumann-Runge radiation from shock heated oxygen, J. Keck, J. Camm, and B. Kivel—723(L)
Calculation of reaction profiles behind steady-state shock waves. I. Application to detonation waves, Russell E. Duff—1193
Comment on reflected shock wave studies, R. A. Strehlow and A. Cohen—983(L)
Gaseous detonation. X. Study of reaction zones, John P. Chesick and G. B. Kistiakowsky—956
Kinetic studies of hydroxyl radicals in shock waves. I. The decomposition of water between 2400° and 3200°K, S. H. Bauer, G. L. Schott, and R. E. Duff—1089
Studies in nonequilibrium rate processes. III. The vibrational relaxation of a system of anharmonic oscillators, Norman W. Bazley, Elliott W. Montroll, Robert J. Rubin, and Kurt E. Shuler—700
Sulfur: A possible metallic form, H. G. David and S. D. Hamann—1006(L)

Solutions (see also Liquids)

Antisymmetrized Hückel orbital calculations of ionization potentials and electron affinities of some aromatic hydrocarbons, R. M. Hedges and F. A. Matsen—950
Comments on the paper "Potentiometric titration, association phenomena, and interaction of neighboring groups in polyelectrolytes," Stuart A. Rice and Frank E. Harris—988(L)
Effect of environment on the fluorine magnetic resonance in solutions of potassium fluoride, Alan Carrington and Theodore Hines—727(L)
Entropies of some diatomic and polyatomic ions, A. P. Altshuller—1254(L)
Fine structure in the electron spin resonance spectra of NO_2 solutions, G. R. Bird, J. C. Baird, and R. B. Williams—738(L)
Hydrogen conversion and exchange reactions in aqueous solutions induced by gamma rays, Harold L. Friedman and Alfred H. Zeltmann—878
Hydrogen formation in concentrated aqueous sodium sulfate solutions by cobalt-60 gamma-ray radiation, H. A. Mahlman—1256(L)
Ionization of strong electrolytes. VI. Nuclear magnetic resonance and dissociation of heptafluorobutyric acid, G. C. Hood and C. A. Reilly—329
Irreversible electrochemical processes in membranes. II. Effects of solvent flow, Yonosuke Kobatake—442
Light scattering and statistical shape of streaming freely flexible linear macromolecules, Anton Peterlin, Wilfried Heller, and Masayuki Nakagaki—470
Nuclear resonance spectrum and structure of SF_4, F. A. Cotton, J. W. George, and J. S. Waugh—994(L)
On dielectric saturation in pure polar liquids and their solutions, A. Chelkowski—1249(L)
On ion-pair formation in polyelectrolytes, Shneior Lifson—989(L)
Raman spectroscopy in liquid ammonia solutions. Vibrational frequencies and force constants for isotopic species of the borohydride ion having tetrahedral symmetry, Allan R. Emery and Robert C. Taylor—1029
Phase changes and spectral shifts, W. W. Robertson and S. E. Babb, Jr.—953
Proton magnetic resonance studies of the acetic acid, phenol, and water in mixtures with pyridine, Koichi Toyoda, Tsuneo Ikenoue, and Taro Isobe—356(L)
Streaming dichroism in polymer solutions: The calculation of results, George R. Bird—1155
Structure in ionic solutions. II, George W. Brady—464
Theoretical derivation of Traube's rule, Ruth H. Aranow and Louis Witten—405
Theory of dilute high-polymer solutions, D. K. Carpenter and W. R. Krigbaum—513(L)
Theory of the dielectric constant of imperfect gases and dilute solutions, Terrell L. Hill—61
Theory of potentials of average force and radial distribution functions in ionic solutions, Emmanuel Meeron—630
Theory of solutions and the reaction kinetics in nucleophilic substitution, C. R. Mueller—846
Transfer of molecular energy between solutes in liquids, J. B. Birks—730(L)
Transfer of molecular energy between solutes in liquids, A. Weinreb—731(L)
Ultrasonic absorption in concentrated sugar solutions, F. R. Flad and R. T. Beyer—985(L)
Ultrasonic absorption in sugar solutions, G. S. Verma—985(L)
Viscosity of dilute solutions of long chain polymer molecules, H. L. Bhatnagar, A. B. Biswas, and M. K. Gharpurey—88

Surface Phenomena

Determination of the Faradaic impedance at solid electrodes and the electrodeposition of copper, J. O'M. Bockris and B. E. Conway—707
Electrical properties of nitrogen adsorbed on tungsten, Joseph Eisinger—165(L)

Surface Phenomena (continued)
Energy exchange between cold gas molecules and a hot graphite surface, Lothar Meyer and Robert Gomer—617
Explanation for some anomalous adsorption effects attributable to an ion gauge, J. T. Law—511(L)
Field emission from mercury whiskers, Robert Gomer—457
Free energy of a nonuniform system. I. Interfacial free energy, John W. Cahn and John E. Hilliard—258
Interaction of rare gases with a tungsten surface, Gert Ehrlich, T. W. Hickmott, and F. G. Hudda—977(L)
Kinetics of the high-temperature heteregenous reaction of chlorine and nickel between 1200 and 1700°K, John D. McKinley, Jr., and Kurt E. Shuler—1207
Low-temperature chemisorption of N_2 and CO, Gert Ehrlich, T. W. Hickmott, and F. G. Budda—506(L)
Photodesorption in zinc oxide semiconductor, D. B. Medved—870
Propagation of electronic excitation in insulating crystals, R. E. Merrifield—647
Surface diffusion of CO on W, Robert Gomer—168(L)
Surface ionization phenomena on polycrystalline tungsten, Jay Zemel—410
Theoretical derivation of Traube's rule, Ruth H. Aranow and Louis Witten—405
Thermionic emission of thoriated tungsten, Petr Schneider—675
Transitions in adsorbed monolayers. I. Experimental, B. B. Fisher and W. G. McMillan—549
Transitions in adsorbed monolayers. II. Theoretical, B. B. Fisher and W. G. McMillan—555
Transitions in adsorbed monolayers. III. Results and comparisons, B. B. Fisher and W. G. McMillan—562

Thermal Diffusion
Unlike molecular interactions and properties of gas mixtures, K. P. Srivastava—543

Thermionic Emission
Thermionic emission of thoriated tungsten, Petr Schneider—675

Thermodynamic Properties
Compression and densities of four solidified hydrocarbons and carbon tetrafluoride at 77°K, John W. Stewart and Ralph I. La Rock—425
Dispersion and absorption of sound in ethyl formate and study of the rotational isomers, Daisaku Tabuchi—1014
Effect of exchange interaction on the magnetic and thermal properties of copper salts and copper coordination compounds, J. C. Eisenstein—323
Electrochemical behavior of the palladium-hydrogen system. I. Potential-determining mechanisms, Sigmund Schuldiner, Gilbert W. Castellan, and James P. Hoare—16
Electrochemical behavior of the palladium-hydrogen system. II. Thermodynamic considerations, Gilbert W. Castellan, James P. Hoare, and Sigmund Schuldiner—20
Electrochemical behavior of the palladium-hydrogen system. III. Gas-charged palladium alloys, James P. Hoare, Sigmund Schuldiner, and Gilbert W. Castellan—22
Electron diffraction study on the rotational isomerism in *n*-propyl chloride, Yonezo Morino and Kozo Kuchitsu—175
Energy release from discharged monatomic gases trapped at 4°K, G. J. Minkoff and F. I. Scherber—992(L)
Entropies of some diatomic and polyatomic ions, A. P. Altshuller—1254(L)
Fractionation of nitrogen and oxygen isotopes between gaseous NO and liquid NOCl, L. B. Yeatts, Jr.—1255(L)
Fragmentation of methane by electron impact, and the latent heat of sublimation of carbon, J. D. Morrison and H. E. Stanton—9
Gaseous species in the vaporization of sodium and potassium hydroxide, Richard F. Porter and Richard C. Schoonmaker—168(L)
Gaseous species in the vaporization of sodium hydroxide, Richard C. Schoonmaker and Richard F. Porter—454
Heat capacities of CrF_3 and $CrCl_3$ from 15 to 300°K, Wilford N. Hansen and Maurice Griffel—902
Heat capacity of sodium tungsten bronzes from 1.8 to 4.2°K, R. W. Vest, M. Griffel, and J. F. Smith—293
Heat of bulb breaking in heat-of-immersion calorimetry, C. A. Guderjahn, D. A. Paynter, P. E. Berghausen, and R. J. Good—520(L)
Ionization and dissociation of NO_2 and N_2O by electron impact, J. Collin and F. P. Lossing—900
Ionization of strong electrolytes. VI. Nuclear magnetic resonance and dissociation of heptafluorobutyric acid, G. C. Hood and C. A. Reilly—329
Kinetics of gas phase halogenation reactions, Sidney W. Benson and Jerry H. Buss—301
Lattice dynamics of hexagonal close-packed metals. II. Frequency spectrum, C. W. Garland and L. J. Slutsky—331
Mass spectrometer analysis of the vapor in equilibrium with the alkali-metal chlorides, Thomas A. Milne, H. Michael Klein, and Daniel Cubicciotti—718(L)
Molecular association of methanol vapor, Richard G. Inskeep, James M. Kelliher, Paul E. McMahon, and Bruce G. Somers—1033
Molecular structure and internal rotation of hexachloroethane, hexachlorodisilane, and trichloromethyl-trichlorosilane, Yonezo Morino and Eizi Hirota—185
Polymerization of alkali halides, P. Kusch—981(L)
Second-order sum rule for the vibrations of isotopic molecules and the second rule of the mean, Jacob Bigeleisen—694
Separation of boron isotopes. I. Boron trihalide addition compounds, R. M. Healy and A. A. Palko—211
Separation of boron isotopes. II. The BF_3 Anisole system, A. A. Palko, R. M. Healy, and L. Landau—214
Specific heat of liquid ozone, Robert I. Brabets and Thomas E. Waterman—1212
Thermal membrane potential, Toshio Ikeda—166(L)
Thermodynamics of nonstoichiometric nickel tellurides. I. Heat capacity and thermodynamic functions of the σ phase from 5 to 350°K, E. F. Westrum, Jr., C. Chou, R. E. Machol, and F. Gronvold—497
Vibrational spectra and thermodynamic properties of ClF_3 and BrF_3, Howard H. Claassen, Bernard Weinstock, and John G. Malm—285

Thermodynamics
Antisymmetrized Hückel orbital calculations of ionization potentials and electron affinities of some aromatic hydrocarbons, R. M. Hedges and F. A. Matsen—950
Chain stiffness and the lattice theory of polymer phases, E. A. DiMarzio and J. H. Gibbs—807
Chemical equilibrium in complex mixtures, W. B. White, S. M. Johnson, and G. B. Dantzig—751
Comments on the paper "Potentiometric titration, association phenomena, and interaction of neighboring groups in polyelectrolytes," Stuart A. Rice and Frank E. Harris—988(L)
Degree of advancement in reactive gas mixtures, Robert L. Potter—893
Determination of relative partial pressures from mass spectrometer ion intensity measurements, Thomas A. Milne—717(L)
Free energy of a nonuniform system. I. Interfacial free energy, John W. Cahn and John E. Hilliard—258

Intermolecular potentials of argon, methane, and ethane, Andrew G. De Rocco and J. O. Halford—1152
Irreversible electrochemical processes of membranes, Yonosuke Kobatake—146
Irreversible electrochemical processes in membranes. II. Effects of solvent flow, Yonosuke Kobatake—442
Lattice dynamics of hexagonal close-packed metals. II. Frequency spectrum, C. W. Garland and L. J. Slutsky—331
Liquid pair distribution, G. H. A. Cole—912
Nature of the glass transition and the glassy state, Julian H. Gibbs and Edmund A. DiMarzio—373
On ion-pair formation in polyelectrolytes, Shneior Lifson—989(L)
Second-order sum rule for the vibrations of isotopic molecules and the second rule of the mean, Jacob Bigeleisen—694
Statistical mechanics of transport processes. XI. Equations of transport in multicomponent systems, Richard J. Bearman and John G. Kirkwood—136
Statistical thermodynamics of quantum fluids, R. M. Mazo and J. G. Kirkwood—644
Theoretical derivation of Traube's rule, Ruth H. Aranow and Louis Witten—405
Theory of dilute high-polymer solutions, D. K. Carpenter and W. R. Krigbaum—513(L)
Thermal membrane potential, Toshio Ikeda—166(L)

Transport Phenomena

Bulk viscosity and shear viscosity in fluids according to the theory of irreversible processes, Karl F. Herzfeld—595
Higher approximations for the transport properties of binary gas mixtures. III. Isotopic thermal diffusion, S. C. Saxena and E. A. Mason—623
Intermolecular potentials of argon, methane, and ethane, Andrew G. De Rocco and J. O. Halford—1152
Linear phenomenological equations, Richard J. Bearman—662
On time smoothing. A model for momentum transport, Marshall Fixman—397
Statistical mechanics of transport processes. XI. Equations of transport in multicomponent systems, Richard J. Bearman and John G. Kirkwood—136
Thermal conductivities of gases at low pressures. I. Monatomic gases, helium and argon, F. G. Waelbroeck and P. Zuckerbrodt—523(L)
Thermal conductivities of gases at low pressures. II. Rotational relaxation times in hydrogen, F. G. Waelbroeck and P. Zuckerbrodt—524(L)
Thermal conductivity of multicomponent gas mixtures, Edward A. Mason—1000(L)
Unlike molecular interactions and properties of gas mixtures, K. P. Srivastava—543

Ultrasonics

Absorption and dispersion of sound in chemically reacting fluids, R. M. Mazo—1223
Dispersion and absorption of sound in ethyl formate and study of the rotational isomers, Daisaku Tabuchi—1014
Sonic velocity in liquid paraffins, Herman I. Leon—748(L)
Ultrasonic absorption in concentrated sugar solutions, F. R. Flad and R. T. Beyer—985(L)
Ultrasonic absorption in sugar solutions, G. S. Verma—985(L)

Valence and Chemical Bond

Antisymmetrized Hückel orbital calculations of ionization potentials and electron affinities of some aromatic hydrocarbons, R. M. Hedges and F. A. Matsen—950
Application of the method of deformed atoms in molecules to the Li_2 molecule, Tadashi Arai and Michiko Sakamoto—32
Application of the Pariser and Parr method to dye ions with amidinium resonance, Sean P. McGlynn and William T. Simpson—297
Calculation of atomic valence state energies, Audrey L. Companion and Frank O. Ellison—1
Chemical bond. II. A one-dimensional approach to the energetics and ionic character, Gordon M. Barrow—485
Computation of certain multicentered molecular integrals, James W. Richardson—362(L)
Configuration interaction study of the electronic structure of the OH radical by the atomic and molecular orbital methods, A. J. Freeman—230
Dependence of force constant on electronegativity, bond strength, and bond order. VII, G. R. Somayajulu—814
Diamagnetic anisotropy of benzene, Peter C. Lykos and Robert G. Parr—361(L)
Electronic structure of some diatomic hydrides, Morris Krauss—1021
Electronic structures of the methyl radical: Effect of 3*s* atomic orbital of carbon, Jiro Higuchi—527
Electrostatic model for prediction of shapes of simple covalent molecules and ions, Alan W. Searcy—1237
Energy of interaction between two excited hydrogen atoms in either 2*s* or 2*p* states, Bruno Linder and Joseph O. Hirschfelder—197
Evaluation of molecular integrals by digital computer, C. C. J. Roothaan—982(L)
Formal Hückel theory, William T. Simpson—972
Hfs of the H_2S molecule and its electronic structure, Kimio Ohno, Yukio Mizuno, and Masataka Mizushima—691
High resolution NMR spectrum of liquid propane, P. T. Narasimhan, N. Laine and Max T. Rogers—1257(L)
Improved molecular orbitals (computations on H_2), P. E. Phillipson and R. S. Mulliken—1248(L)
Infrared spectra of HCl-HBr mixed crystals, G. L. Hiebert and D. F. Hornig—316
Length of the single bond between trigonally hybridized carbon atoms, Denys Cook—1001(L)
Molecular orbitals in the $B_4H_7^-$ and $B_6H_{11}^+$ ions, William N. Lipscomb—170(L)
NMR chemical shifts of PB^{207} in a few compounds, L. H. Piette and H. E. Weaver—735(L)
Note on the approximation of two-center exchange integrals, P. Csavinszky—996(L)
Nuclear quadrupole coupling in the Li_2 molecule, Isao Mannari and Tadashi Arai—28
On covalent bond length and bond order. VIII, G. R. Somayajulu—822
One-center wave function of the hydrogen molecule, Hubert W. Joy and Robert G. Parr—448
Origin of interaction terms in molecular vibrations, Louis Burnelle and Jules Duchesne—726(L)
Out-of-plane vibrations of a conjugated hydrocarbon: *trans*-butadiene, Tosinobu Anno—994
Proton magnetic resonance chemical shift of free (gaseous) and associated (liquid) hydride molecules, W. G. Schneider, H. J. Bernstein, and J. A. Pople—601
Pure quadrupole resonance determinations of molecular charge distributions. I. Substituted quinones, quinolines, pyridines, pyrimidines, and triazines, P. J. Bray, Saul Moskowitz, H. O. Hooper, R. G. Barnes, and S. L. Segel—99
Quadrupole coupling of solid cyanogen chloride, P. A. Casabella and P. J. Bray—1182

Valence and Chemical Bond (continued)
Quantum mechanics of the H_3 complex, George E. Kimball and John G. Trulio—493
Resonance in sterically hindered aromatic molecules, F. J. Adrian—608
Role of atomic valence states in molecular energy calculations, A. C. Hurley—532
Sensitive vibrational frequencies. III. Empirical relation for electronegativity applicable to the calculation of group electronegatives, J. K. Wilmshurst—733(L)
Some comments on the strength of single coordinate bonds, W. S. Fyfe—907
Some two-center overlap integrals with AO's of principal quantum number four, L. Leifer, F. A. Cotton, and J. R. Leto—364(L)
Spectral comparison of polyenes, cumulenes, and polyynes, Helmut Krauch—898
Spin densities in the perinaphthenyl free radical, Harden M. McConnell and Henry H. Dearman—51
Theory of isotropic hyperfine interactions in π-electron radicals, Harden M. McConnell and Donald B. Chesnut —107
Theory of separated electron pairs, Joe M. Parks and Robert G. Parr—335

Viscosity
Bulk viscosity and shear viscosity in fluids according to the theory of irreversible processes, Karl F. Herzfeld—595
High-temperature gas viscosities. I. Nitrous oxide and oxygen, C. J. G. Raw and C. P. Ellis—1198
Intermolecular potentials of argon, methane, and ethane, Andrew G. De Rocco and J. O. Halford—1152
New method for measuring the two relaxation times of a viscoelasitc liquid, Ali Abdel Kerim Ibrahim—1264(L)
On time smoothing. A model for momentum transport Marshall Fixman—397
Self-diffusion of liquids at the freezing point, J. D. Mackenzie and W. B. Hillig—1259(L)
Stokes' and Einstein's law for nonuniform viscosity, S. Broersma—1158
Unlike molecular interactions and properties of gas mixtures, K. P. Srivastava—543
Viscosity of dilute solutions of long chain polymer molecules, H. L. Bhatnagar, A. B. Biswas, and M. K. Gharpurey—88
Viscous flow of liquids at constant volume and constant pressure, J. D. Mackenzie—1037

X-Ray Diffraction
Crystal and molecular structure of diboron tetrafluoride, B_2F_4, Louis Trefonas and William N. Lipscomb—54
Molecular and crystal structure of B_6H_{10}, F. L. Hirshfeld, K. Eriks, R. E. Dickerson, E. L. Lippert, Jr., and William N. Lipscomb—56
Soft x-ray absorption edges of metal ions in complexes. III. Zinc (II) complexes, F. Albert Cotton and Harold P. Hanson—83
Structure in ionic solutions. II, George W. Brady—464
Structure of sodium metaphosphate glass, George W. Brady —48

Absorption Spectra

Absolute infrared intensities in gaseous and liquid CS_2, P. N. Schatz—959(L)

Absolute infrared intensities of the fundamental vibrations of NF_3, Paul N. Schatz and Ira W. Levin—475

Absorption and photoionization coefficients of furan vapor, K. Watanabe and Toshio Nakayama—48

Absorption spectra in molten salt solutions, Jacob Greenberg and Benson R. Sundheim—1029

Absorption spectrum of rubidium in the presence of isomeric hydrocarbons, Oleg Jefimenko and Joel Anderson Gwinn—148

Absorption spectrum of the nitrosonium ion, T. A. Turney and G. A. Wright—252(L)

Anharmonic constant x_{22} of $N^{14}O_2$, J. W. Keller and A. H. Nielsen—252(L)

Carbon-13 nuclear resonance spectrum and low-frequency infrared spectrum of iron pentacarbonyl, F. A. Cotton, A. Danti, J. S. Waugh, and R. W. Fessenden—1427(L)

Changes in the near ultraviolet spectrum of crystalline hexamethylbenzene accompanying a low temperature phase transition, O. Schnepp—56

Characteristic B—H stretching frequencies in alkydiboranes, I. Shapiro, C. O. Wilson, and W. J. Lehmann—237(L)

Determination of transition moment orientation in partially oriented polymers, R. D. B. Fraser—1428(L)

Effect of aluminum and germanium on the spectral absorption of certain types of quartz growth, Frank Augustine and Danforth R. Hale—685(L)

Effect of pressure on the spectra of certain transition metal complexes, R. W. Parsons and H. G. Drickamer—930

Effective symmetries of electrical fields about ions in solution, Donald G. Miller, Edward V. Sayre, and Simon Freed—454(L)

Effects of hydrostatic pressure on the intensity of the singlet-triplet transition of α-chloronaphthalene in ethyl iodide, W. W. Robertson and R. E. Reynolds—138

Electric strength, molecular structure, and ultraviolet spectra of hydrocarbon gases, A. E. D. Heylen—813

Enhancement of infrared absorption bands of charge transfer complexes, E. E. Ferguson and F. A. Matsen—105

Errata: Electronic interaction in the free-electron network model for conjugated systems. I. Theory, Norman S. Ham and Klaus Ruedenberg—237(L)

Evaluation of force constants of plane XY_3 molecules from vibrational data, C. W. F. T. Pistorius—1174

Experimental and theoretical study of the shape of the F absorption in KCl, Jordan J. Markham and John D. Konitzer—673(L)

Fluorescence spectrum of $PrCl_3$ and the levels of the Pr^{+++} ion, G. H. Dieke and R. Sarup—741

Force constants of the P_4 molecule, C. W. F. T. Pistorius—1421(L)

Ground state inversion spectrum of $N^{14}D_3$, Gabriel Herrmann—875

Higher-order rotation-vibration energies of polyatomic molecules. IV, Gilbert Amat and Harald H. Nielsen—665

Hydrogen→deuterium exchange reaction in fibrous proteins. I, R. D. B. Fraser and T. P. MacRae—1024

Infrared absorption associated with strong hydrogen bonds, Norman Albert and Richard M. Badger—1193(L)

Infrared absorption intensities of hexafluorobenzene, D. Steele and D. H. Whiffen—1194(L)

Infrared absorption of cyanogen in the cesium iodide region and CN bond moment, Tatsuo Miyazawa—421

Infrared spectra of the alkaline-earth halides. I. Beryllium fluoride, beryllium chloride, and magnesium chloride, Alfred Büchler and William Klemperer—121

Infrared spectra of partially deuterated diboranes, Walter J. Lehmann, Jerome F. Ditter, and I. Shapiro—1248

Internal barrier of propylene oxide from the microwave spectrum. II, Dudley R. Herschbach and Jerome D. Swalen—761

Ligand field theory of Ni(II) complexes. II. Electronic spectra and structure of some paramagnetic chelates, Gilda Maki—162

Ligand field theory of Ni(II) complexes. III. Electronic spectra and solution paramagnetism of some diamagnetic Ni(II) complexes, Gilda Maki—1129

Line widths and integrated absorption coefficients for the ultraviolet bands of OH, Walter E. Kaskan—1420(L)

Matrix isolation studies. Possible infrared spectra of isomeric forms of diazomethane and of methylene, CH_2, Dolphus E. Milligan and George C. Pimentel—1405

Mean amplitudes of vibration in allene and allene-d_4 molecules. I, Sven J. Cyvin—583

Microwave spectra of molecules exhibiting internal rotation. IV. Isobutane, tertiary butyl fluoride, and trimethylphospine, David R. Lide, Jr. and D. E. Mann—914

Microwave spectrum, internal barrier, structure, equilibrium configuration, and dipole moment of methyl monofluorosilane, Louis Pierce—383

Microwave spectrum, structure, dipole moment, and quadrupole coupling constant of propargyl chloride, Eizi Hirota, Takeshi Oka, and Yonezo Morino—444(L)

Microwave studies of the structure of cyclopropyl derivatives, James P. Friend and B. P. Dailey—577

Molecular structure and vibrational spectra of alkali halide dimers, Joseph Berkowitz—1386

Neutron diffraction study of gypsum, $CaSO_42H_2O$, Masao Atoji and R. E. Rundle—1306

Nonresonant absorption of symmetric top molecules. Collision cross section, George Birnbaum and A. A. Maryott—1422(L)

Normal vibrations of *N*-methylacetamide, Tatsuo Miyazawa, Takehiko Shimanouchi, and San-ichiro Mizushima—611

Optical dispersion of gases in the infrared, J. H. Jaffe, M. A. Hirschfeld, and S. Kimel—675(L)

Oscillator strength of absorption band in dye molecules, Hans Kuhn—958(L)

Partial revision: absorption spectrum and quantum states of the praseodymium ion. I. Single crystals of praseodymium chloride, Edward V. Sayre, Kenneth M. Sancier, and Simon Freed—242(L)

Perpendicular bands of allene and allene-d_4, John Overend and Bryce Crawford, Jr.—1002

Photolysis of nitromethane and of methyl nitrite in an argon matrix; infrared detection of nitroxyl, HNO, Harmond W. Brown and George C. Pimentel—883

Potential function of NF_3, Paul N. Schatz—481

Preparation of thin crystalline samples of the alkali hydroxides for infrared absorption studies, Kenneth A. Wickersheim—1197(L)

Relative intensities of microwave absorption lines, Peter H. Verdier and E. Bright Wilson, Jr.—340

Rotational isomerism in 1-fluoro-1,1,2,2-tetrachloroethane, R. E. Kagarise—680(L)

Absorption Spectra (continued)
Schumann-Runge oxygen absorption in shock-heated air, W. H. Wurster, C. E. Treanor, and H. S. Glick—250(L)
Semiempirical calculation on the electronic structure of the nitrogen-containing heterocyclic molecules. I. General theory, Tosinobu Anno—1161
Semiempirical calculation on the electronic structure of the nitrogen-containing heterocyclic molecules. II. Electronic structure of pyrazine with particular reference to its n-π transition, Tosinobu Anno and Akira Sadô—1170
Spectra of homologous series of monosubstituted amides, M. Beer, H. B. Kessler, and G. B. B. M. Sutherland—1097
Spectroscopic comparison of $\pi-\sigma$ to $\pi-\pi$ electron forces between benzene and various diluent molecules, W. W. Robertson, J. M. Robinson, and S. E. Babb, Jr.—243(L)
Spin-orbit coupling in the $^3A_2-{}^1A_1$ transition of formaldehyde, Jerome W. Sidman—644
Studies of the effect of oxygen on the spectra of barium oxide films, Joseph Cunningham—1196(L)
Substituted methanes. XXVIII. Infrared spectral data and assignments for $CHCl_2F$ and $CHClF_2$ and potential energy constants and calculated thermodynamic properties for $CHCl_2F$, $CDCl_2F$, $CHClF_2$, and $CDClF_2$, Herman B. Weissman, Arnold G. Meister, and Forrest F. Cleveland—72
Symmetrization of secular determinant for normal vibration calculation, Tatsuo Miyazawa—246(L)
Theory of electronic-vibrational interaction for rare earth and actinide series ions in crystals. II. Octahedral complexes, Robert A. Satten—658
Torsional frequencies of 1,2-dihalogenoethanes, Isao Ichishima, Hideo Kamiyama, Takehiko Shimanouchi, and San-ichiro Mizushima—1190(L)
Triatomic linear molecules containing carbon and oxygen, sulfur, selenium, or tellurium. I. Vibrational spectra of CS_2, CSe_2, SCSe, and SCTe, Tunis Wentink, Jr.—188
Upper limit to the intensity of the 3400 A singlet-triplet absorption in benzene, D. P. Craig J. M. Hollas, and G. W. King—974(L)
Vibration frequencies of some tetrahedral hydride ions, David A. Brown—451(L)
Vibration-rotation bands of ammonia. III. The region 3.2–4.3 microns, W. S. Benedict, Earle K. Plyler, and E. D. Tidwell—829
Vibrational intensities. X. Integration theorems, Bryce Crawford, Jr.—1042
Vibrational spectra of the crystalline methyl halides, David A. Dows—484
Vibrational spectrum and structure of metal-cyanide complexes in the solid state. IV. $K_3Cu(CN)_4$, Llewellyn H. Jones—463
Vibrational spectrum of disilyl sulfide, H. Richard Linton and Eugene R. Nixon—921
Vibronically induced absorption of forbidden infrared transitions, Walter R. Thorson—938
Infrared of
Alkali halide dimers, Joseph Berkowitz—1386
Alkali hydroxides, Kenneth A. Wickersheim—1197(L)
Alkydiboranes, I. Shapiro, C. O. Wilson, and W. J. Lehmann—237(L)
Allene and allene-d_4, John Overend and Bryce Crawford, Jr.—1002
Allene and allene-d_4 molecules. I, Sven J. Cyvin—583
Ammonia, W. S. Benedict, Earle K. Plyler, and E. D. Tidwell—829
Beryllium fluoride, beryllium chloride, and magnesium chloride, Alfred Büchler and William Klemperer—121
$CaSO_4 2H_2O$, Masao Atoji and R. E. Rundle—1306
Charge transfer complexes, E. E. Ferguson and F. A. Matsen—105
$CHCl_2F$, $CHClF_2$, $CHCl_2F$, $CDCl_2F$, $CHClF_2$, and $CDClF_2$, Herman B. Weissman, Arnold G. Meister, and Forrest F. Cleveland—72
Crystalline methyl halides, David A. Dows—484
CS_2, P. N. Schatz—959(L)
CS_2, CSe_2, SCSe, and SCTe, Tunis Wentink, Jr.—188
Cyanogen, Tatsuo Miyazawa—421
Diazomethane and CH_2, Dolphus E. Milligan and George C. Pimentel—1405
Disilyl sulfide, H. Richard Linton and Eugene R. Nixon—921
Gases, J. H. Jaffe, M. A. Hirschfeld, and S. Kimel—675(L)
Fibrous proteins. I, R. D. B. Fraser and T. P. MacRae—1024
Forbidden infrared transitions, Walter R. Thorson—938
Hexafluorobenzene, D. Steele and D. H. Whiffen—1194(L)
HNO, Harmond W. Brown and George C. Pimentel—883
Hydrogen bonds, Norman Albert and Richard M. Badger—1193(L)
Integration theorems, Bryce Crawford, Jr.—1042
Iron pentacarbonyl, F. A. Cotton, A. Danti, J. S. Waugh, and R. W. Fessenden—1427(L)
$K_3Cu(CN)_4$, Llewellyn H. Jones—463
Methyl nitrite in an argon matrix, Harmond W. Brown and George C. Pimentel—883
Molecules, Tatsuo Miyazawa—246(L)
Monosubstituted amides, M. Beer, H. B. Kessler, and G. B. B. M. Sutherland—1097
Paul N. Schatz—481
NF_3, Paul N. Schatz and Ira W. Levin—475
$N^{14}O_2$, J. W. Keller and A. H. Nielsen—252(L)
Nitromethane in an argon matrix, Harmond W. Brown and George C. Pimental—883
N-methylacetamide, Tatsuo Miyazawa, Takehiko Shimanouchi, and San-ichiro Mizushima—611
1-Fluoro-1,1,2,2-tetrachloroethane, R. E. Kagarise—680(L)
1,2-Dihalogenoethanes, Isao Ichishima, Hideo Kamiyama, Takehiko Shimanouchi, and San-ichiro Mizushima—1190(L)
Partially deuterated diboranes, Walter J. Lehmann, Jerome F. Ditter, and I. Shapiro—1248
Partially oriented polymers, R. D. B. Fraser—1428(L)
P_4 molecule, C. W. F. T. Pistorius—1421(L)
Plane XY_3 molecules, C. W. F. T. Pistorius—1174
Polyatomic molecules. IV, Gilbert Amat and Harald H. Nielsen—665
Quartz, Frank Augustine and Danforth R. Hale—685(L)
Rubidium, Oleg Jefimenko and Joel Anderson Gwinn—148
Tetrahedral hydride ions, David A. Brown—451(L)
Microwave of
Absorption lines, Peter H. Verdier and E. Bright Wilson, Jr.—340
Cyclopropyl derivatives, James P. Friend and B. P. Dailey—577
Isobutane, tertiary butyl fluoride, and trimethylphospine, David R. Lide, Jr. and D. E. Mann—914
Methyl monofluorosilane, Louis Pierce—383
$N^{14}D_3$, Gabriel Herrmann—875
Propargyl chloride, Eizi Hirota, Takeshi Oka, and Yonezo Morino—444(L)
Propylene oxide, Dudley R. Herschbach and Jerome D. Swalen—761
Symmetric top molecules, George Birnbaum and A. A. Maryott—1422(L)
Of Crystals
Effect of aluminum and germanium on the spectral absorption of certain types of quartz growth, Frank Augustine and Danforth R. Hale—685(L)

Effect of pressure on the spectra of certain transition metal complexes, R. W. Parsons and H. G. Drickamer—930
Experimental and theoretical study of the shape of the *F* absorption in KCl, Jordan J. Markham and John D. Konitzer—673(L)
Fluorescence spectrum of $PrCl_3$ and the levels of the Pr^{+++} ion, G. H. Dieke and R. Sarup—741
Infrared absorption associated with strong hydrogen bonds, Norman Albert and Richard M. Badger—1193(L)
Neutron diffraction study of gypsum, $CaSO_4 2H_2O$, Masao Atoji and R. E. Rundle—1306
Preparation of thin crystalline samples of the alkali hydroxides for infrared absorption studies, Kenneth A. Wickersheim—1197(L)

Studies of the effect of oxygen on the spectra of barium oxide films, Joseph Cunningham—1196(L)
Theory of electronic-vibrational interaction for rare earth and actinide series ions in crystals. II. Octahedral complexes, Robert A. Satten—658
Vibrational spectra of the crystalline methyl halides, David A. Dows—484
Vibrational spectrum of disilyl sulfide, H. Richard Linton and Eugene R. Nixon—921
Visible or Ultraviolet of
α-Chloronaphthalene in ethyl iodide, W. W. Robertson and R. E. Reynolds—138
Barium oxide films, Joseph Cunningham—1196(L)
Benzene, D. P. Craig, J. M. Hollas, and G. W. King—974(L)
Benzene, W. W. Robertson, J. M. Robinson, and S. E. Babb, Jr.—243(L)
Crystalline hexamethylbenzene, O. Schnepp—56
Dye molecules, Hans Kuhn—958(L)
Formaldehyde, Jerome W. Sidman—644
Furan vapor, K. Watanabe and Toshio Nakayama—48
Hydrocarbon gases, A. E. D. Heylen—813
Ions in solution, Donald G. Miller, Edward V. Sayre, and Simon Freed—454(L)
KCl, Jordan J. Markham and John D. Konitzer—673(L)
Molten salt solutions, Jacob Greenberg and Benson R. Sundheim—1029
Nitrogen-containing heterocyclic molecules, Tosinobu Anno—1161
Ni(II) complexes, Gilda Maki—162
Ni(II) complexes, Gilda Maki—1129
Nitrosonium ion, T. A. Turney and G. A. Wright—252(L)
Octahedral complexes, Robert A. Satten—658
OH, Walter E. Kaskan—1420(L)
Oxygen, W. H. Wurster, C. E. Treanor, and H. S. Glick—250(L)
Partial revision: Praseodymium ion, Edward V. Sayre, Kenneth M. Sancier, and Simon Freed—242(L)
$PrCl_3$ and Pr^{+++} ion, G. H. Dieke and R. Sarup—741
Pyrazine, Tosinobu Anno and Akira Sadô—1170
Quartz, Frank Augustine and Danforth R. Hale—685(L)
Rubidium, Oleg Jefimenko and Joel Anderson Gwinn—148
Transition metal complexes, R. W. Parsons and H. G. Drickamer—930

Apparatus and Methods

Direct nitrogen calibration of dead space in gas adsorption systems, William V. Loebenstein—236(L)
Method for growing large CdS and ZnS single crystals, L. C. Greene, D. C. Reynolds, S. J. Czyzak, and W. M. Baker—1375
Note on the absorption of radiation by a cylindrical sample of a strong absorber, Edward A. Mason—1184(L)
Preparation of thin crystalline samples of the alkali hydroxides for infrared absorption studies, Kenneth A. Wickersheim—1197(L)

Catalysis

Concerning the electrical conductivity of calcium fluoride, Tryggve Baak—1195
Dielectric properties of aqueous and alcoholic electrolytic solutions, J. B. Hasted and G. W. Roderick—17
Diffusion and heterogeneous reaction. II. The catalytic activity of solids for hydrogen-atom recombination, Bernard J. Wood and Henry Wise—1416(L)
Statistical theory of chemical reaction rates, James C. Keck—410

Centrifugation

Sedimentation in multicomponent systems, Leonard Peller—415

Conductance

Organic photoconductors. IV. Sign of the charge carrier, R. C. Nelson—388
Structure of liquid germanium dioxide, J. D. Mackenzie—605

Crystal Growth

Effect of poisons on crystal growth, Gerald W. Sears—1045
Growth of potassium chloride crystals from aqueous solution, Gerald W. Sears—979
Method for growing large CdS and ZnS single crystals, L. C. Greene, D. C. Reynolds, S. J. Czyzak, and W. M. Baker—1375
Thermodynamic driving force in nucleation and growth processes, John D. Hoffman—1192(L)

Crystalline State

Calculation of volumes of activation for diffusion in solids, Robert W. Keyes—467
Concerning the electrical conductivity of calcium fluoride, Tryggve Baak—1195(L)
Delayed fluorescence in naphthalene crystals at 4°K, H. Sponer, Y. Kanda, and L. A. Blackwell—721
Delayed singlet-singlet emission from molecular crystals, Norman W. Blake and Donald S. McClure—722
Diffusion and exchange of zinc in crystalline zinc sulfide, E. A. Secco—406
Effect of aluminum and germanium on the spectral absorption of certain types of quartz growth, Frank Augustine and Danforth R. Hale—685(L)
Effect of poisons on crystal growth, Gerald W. Sears—1045
Effect of pressure on the spectra of certain transition metal complexes, R. W. Parsons and H. G. Drickamer—930
Electric field gradients in ionic crystals. I. Nuclear quadrupole coupling constants, Richard Bersohn—326
Electron spin resonance in transition metal chelates. I. Copper II bis-acetylacetonate, A. H. Maki and B. R. McGarvey—31
Electron spin resonance in transition metal chelates. II. Copper (II) bis-salicylaldehyde-imine, A. H. Maki and B. R. McGarvey—35
Errata: High-temperature thermodynamic properties of uranium dioxide, Raymond J. Ackermann, Paul W. Gilles, and R. J. Thorn—237(L)
Experimental and theoretical study of the shape of the *F* absorption in KCl, Jordan J. Markham and John D. Konitzer—673(L)
Fluorescence spectra, term assignments, and crystal field splittings of rare earth activated phosphors, Seymour P. Keller—180
Fluorescence spectrum and low levels of $NdCl_3$, E. Carlson and G. H. Dieke—229(L)

Crystalline State (continued)

Fluorescence spectrum of $PrCl_3$ and the levels of the Pr^{+++} ion, G. H. Dieke and R. Sarup—741
Free radical formation in solids by ion bombardment, Harold A. Papazian—448(L)
Free rotation in solids at 4.2°K, Harden M. McConnell—1422(L)
Growth of potassium chloride crystals from aqueous solution, Gerald W. Sears—979
Interaction energies of next-nearest neighbors, Thomas E. Allen—951(L)
Isotropic nuclear resonance shifts, Harden M. McConnell and Richard E. Robertson—1361
Lattice dynamics of hexagonal close-packed metals. III, L. J. Slutsky—1191(L)
Line width of the pure quadrupole resonance of chlorine in sodium chlorate, Tokujiro Fuke and Yoshitaka Kôi—973(L)
Low temperature quenching of energy transfer, L. E. Lyons and J. W. White—447(L)
Nonstoichiometry in uranium dioxide, S. Aronson and J. Belle—151
Nuclear magnetic resonance or molten and solid thallium salts, T. J. Rowland and J. Phillip Bromberg—626
Nuclear resonance study of structure and molecular motions in some cobalt complex salts, G. R. Murray, Jr., and J. S. Waugh—207
Number of single, double, and triple clusters in a system containing two types of atoms, Robert E. Behringer—537
On Das' theory of nuclear magnetic resonance in solids, J. W. McGrath and A. A. Silvidi—103
On the anisotropic thermal conductivity of tetragonal $BaTiO_3$, E. Snitzer and C. R. Mingins—1187(L)
Paramagnetic resonance absorption in naphthalene in its phosphorescent state, Clyde A. Hutchison, Jr., and Billy W. Mangum 952(L)
Paramagnetic resonance in rare earth trichlorides, Clyde A. Huchison, Jr., and Eugene Wong—754
Partial revision: Absorption spectrum and quantum states of the praseodymium ion. I. Single crystals of praseodymium chloride, Edward V. Sayre, Kenneth M. Sancier, and Simon Freed—242(L)
Photovoltaic effect and photoconductivity in laminated organic systems, David Kearns and Melvin Calvin—950(L)
Potential energy functions for graphite, A. D. Crowell—446(L)
Proton resonance observation of mechanical destruction of magnetic ordering in liquid crystals, John Hubert Muller and R. D. Spence—1195(L)
Relation of magnetic disordering to the thermodynamics of solid metallic solutions, R. A. Oriani—679(L)
Some aspects of photoconductivity in cadmium selenide crystals, Richard H. Bube and Lucian A. Barton—128
Spin exchange and spin-lattice relaxation induced by mechanical rotation of solids, D. E. Woessner and H. S. Gutowsky—804
Theory of cold crystallization of high polymers, B. Wunderlich—1395
Theory of electronic-vibrational interaction for rare earth and actinide series ions in crystals. II. Octahedral complexes, Robert A. Satten—658
Thermal diffusion of vacancies in zinc, Paul Shewmon—1032
Thermal motion in ice and heavy ice, Alfred Zajac—1324
Unusual temperature dependence of bromine quadrupole resonances in $TiBr_4$, R. G. Barnes and R. D. Engardt—248(L)
Vibrational spectra of the crystalline methyl halides, David A. Dows—484
Vibrations of a generalized diatomic lattice, Alexei Maradudin and George H. Weiss—631
Zero field splittings in atomic nitrogen at 4.2°K, Terry Cole and Harden M. McConnell—451(L)

Crystal Structure

Crystal structure of copper fluoride dihydrate, $CuF_2 \cdot 2H_2O$, S. Geller and W. L. Bond—925
Infrared absorption associated with strong hydrogen bonds, Norman Albert and Richard M. Badger—1193(L)
Neutron diffraction study of gypsum, $CaSO_4 2H_2O$, Masao Atoji and R. E. Rundle—1306
Proton resonance in dioptase $(CuSiO_3 \cdot H_2O)_6$, R. D. Spence and J. H. Muller—961(L)
Structure of potassium hydrogen maleate by neutron diffraction, S. W. Peterson and Henri A. Levy—948(L)
Vibrational spectra of the crystalline methyl halides, David A. Dows—484

Detonation (see also Shock Waves)

Detonation velocity of gaseous ozone, A. G. Streng, C. S. Stokes, and L. A. Streng—458(L)
Further comments on the letter of Fay and Opel, Russell E. Duff and Herbert T. Knight—956(L)
Gaseous detonations. XI. Double waves, Mark Cher and G. B. Kistiakowsky—506
Present status of detonation theory, W. W. Wood and J. G. Kirkwood—957(L)
Two-dimensional effects in gaseous detonation waves, James A. Fay and Gerhard Opel—955(L)

Dielectrics

Correction to the viscoelectric constant, John Hart—960(L)
Dielectric properties of aqueous and alcoholic electrolytic solutions, J. B. Hasted and G. W. Roderick—17
Microwave absorption and molecular structure in liquids. XXIV. Dielectric relaxation of liquid ammonia, Kenneth Fish, Robert C. Miller, and Charles P. Smyth—745
Theory of orientational effects and related phenomena in dielectric liquids, A. Piekara and S. Kielich—1297

Diffusion

Adsorption and diffusion of inert gases on tungsten, Robert Gomer—441(L)
Calculation of volumes of activation for diffusion in solids, Robert W. Keyes—467
Composition dependence of the diffusion coefficient of the system A—Xe, I. Amdur and T. F. Schatzki—1425(L)
Diffusion and exchange of zinc in crystalline zinc sulfide, E. A. Secco—406
Diffusion and chemical kinetics. Integration of the probability after-effect equation for a spherical volume element, John Rehner, Jr.—962(L)
Diffusion and heterogeneous reaction. I. The dynamics of radical reactions, Henry Wise and Clarence M. Ablow—634
Diffusion and heterogeneous reaction. II. The catalytic activity of solids for hydrogen-atom recombination, Bernard J. Wood and Henry Wise—1416(L)
Diffusion of hydrogen in palladium, P. A. Silberg and C. H. Bachman—778
Errata: Ion exchange kinetics. A nonlinear diffusion problem, F. Helfferich and M. S. Plesset—679(L)
Interrelations involving solutions of equations of equalizing processes and oscillating processes, D. G. O'Sullivan—689
Ion exchange kinetics. A nonlinear diffusion problem. II. Particle diffusion controlled exchange of univalent and bivalent ions, M. S. Plesset, F. Helfferich, and J. N. Franklin—1064
Molecular diffusion studies in gases in high temperature. I. The point source technique, R. E. Walker and A. A. Westenberg—1139

Molecular diffusion studies in gases at high temperature. II. Interpretation of results on the He−N_2 and CO_2−N_2 systems, R. E. Walker and A. A. Westenberg—1147
Self-diffusion in argon to 300 atmospheres, T. R. Mifflin and C. O. Bennett—975
Theory of diffusion near walls, Marshall Fixman—540

Dipole Moment

Dielectric properties of polypeptide solutions. I. The electric dipole moment of α helix in dioxane, Akiyoshi Wada—674(L)
Dipole moment of ammonia-borane, J. R. Weaver, S. G. Shore, and R. W. Parry—1
Electronic structure of LiH. III. The Knipp wave function, Fred T. Ormand and F. A. Matsen—100
Infrared absorption of cyanogen in the cesium iodide region and CN bond moment, Tatsuo Miyazawa—421
Intramolecular twisting effects in substituted benzenes. II. Ground-state properties, Eion G. McRae and Lionel Goodman—334
Ligand field theory of Ni(II) complexes. II. Electronic spectra and structure of some paramagnetic chelates, Gilda Maki—162
Microwave spectrum, internal barrier, structure, equilibrium configuration, and dipole moment of methyl monofluorosilane, Louis Pierce—383
Microwave spectrum, structure, dipole moment, and quadrupole coupling constant of propargyl chloride, Eizi Hirota, Takeshi Oka, and Yonezo Morino—444(L)
Nonresonant absorption of symmetric top molecules. Collision cross section, George Birnbaum and A. A. Maryott—1422(L)
Rotational isomerism in 1-fluoro-1,1,2,2-tetrachloroethane, R. E. Kagarise—680

Electrochemistry

Electrode potentials of the palladium-hydrogen system, Ted B. Flanagan and F. A. Lewis—1417(L)
Recalculation of the Latimer, Pitzer, and Slansky absolute electrode potential—a discussion of its operational significance, Andre J. de Bethune—616
Static space-charge and capacitance for a single blocking electrode, J. Ross Macdonald—1346

Electron Diffraction

Mean amplitudes of vibration in allene and allene-d_4 molecules. I, Sven J. Cyvin—583

Electrophoresis

Electrophoretic electroosmotic pressure, Irvin Levin—239(L)

Emission Spectra

Fast neutron induced luminescence in vitreous silica and quartz, William Primak and Robert A. Uphaus—972(L)
Infrared chemiluminescence from the gaseous reaction atomic H·plus Cl_2, J. K. Cashion and J. C. Polanyi—455(L)
Infrared emission spectra from a carbon furnace, E. A. Ballik and D. A. Ramsay—1418(L)
Infrared emissivity of NO in high-temperature air, R. G. Breene, Jr.—512
Mechanism of the Lewis-Rayleigh nitrogen afterglow, K. D. Bayes and G. B. Kistiakowsky—949(L)
Shock tube study of luminosity in xenon, Walter Roth and Per Gloersen—820
Some precursors produced in the electrodeless discharge synthesis of B_2Cl_4, R. T. Holzmann and W. F. Morris—677(L)

Equation of State

Compressibilities of simple metals, W. G. McMillan and A. L. Latter—15
Errata: Nodal equation of state and phase transitions in fluids, Emmanuel Meeron—444(L)
Internal energy-compressibility-temperature equation for air in dissociative and ionic equilibrium, Perrin Winchell—687

Errata

Absorption and dispersion of sound in chemically reacting fluids, R. M. Mazo—1186(L)
Electron spin resonance of N^{15}-nitrobenzene negative ion, Raymond L. Ward and Melvin P. Klein—678(L)
Electronic interaction in the free-electron network model for conjugated systems. I. Theory, Norman S. Ham and Klaus Ruedenberg—237(L)
High-resolution NMR spectrum of liquid propane, P. T. Narasimhan, N. Laine, and M. T. Rogers—1184(L)
High-temperature gas viscosities. I. Nitrous oxide and oxygen, C. J. G. Raw and C. P. Ellis—1185(L)
High-temperature thermodynamic properties of uranium dioxide, Raymond J. Ackermann, Paul W. Gilles, and R. J. Thorn—237(L)
Ion exchange kinetics. A nonlinear diffusion problem, F. Helfferich and M. S. Plesset—679(L)
Nodal equation of state and phase transitions in fluids, Emmanuel Meeron—444(L)
Paramagnetism in diamagnetic molecules, William Weltner, Jr.—1185(L)
Second-order sum rule for the vibrations of isotopic molecules and the second rule of the mean, Jacob Bigeleisen—237(L)
Self-diffusion coefficient and viscosity in liquids, James C. M. Li—1421(L)
Studies in nonequilibrium rate Processes. III. The vibrational relaxation of a system of anharmonic oscillators, Norman W. Bazley and Elliott W. Montroll—1185(L)
Theory of helix-coil transitions in polypeptides, J. H. Gibbs and E. A. DiMarzio—679(L)
Theory of potentials of average force and radial distribution functions in ionic solutions, Emmanuel Meeron—444(L)

Field Emission Microscopy

Adsorption and diffusion of inert gases on tungsten, Robert Gomer—441(L)
Scattering lengths of inert gases for electrons of negative energy. Field emission through dielectrics, Robert Gomer—443(L)
Study of molecular patterns in the field emission microscope, Allan J. Melmed and Erwin W. Müller—1037

Flames

Effect of pressure on ion formation in propane-air flames, I. R. King—681(L)

Fluorescence

Delayed fluorescence in naphthalene crystals at 4°K, H. Sponer, Y. Kanda, and L. A. Blackwell—721
Delayed singlet-singlet emission from molecular crystals, Norman W. Blake and Donald S. McClure—722
Fast neutron induced luminescence in vitreous silica and quartz, William Primak and Robert A. Uphaus—972(L)
Fluorescence spectra, term assignments, and crystal field splittings of rare earth activated phosphors, Seymour P. Keller—180
Fluorescence spectrum and low levels of $NdCl_3$, E. Carlson and G. H. Dieke—229(L)
Fluorescence spectrum of $PrCl_3$ and the levels of the Pr^{+++} ion, G. H. Dieke and R. Sarup—741

Fluorescence (continued)
Influence of oxygen on the transfer efficiency and fluorescent yield of organic solutions, V. Bar and A. Weinreb—
Low-temperature quenching of energy transfer, L. E. Lyons and J. W. White—447(L)

Gases

Absolute infrared intensities in gaseous and liquid CS_2, P. N. Schatz—959(L)
Approximate formulas for the viscosity and thermal conductivity of gas mixtures, Richard S. Brokaw—391
Composition dependence of the diffusion coefficient of the system A–Xe. I, Amdur and T. F. Schatzki—1425(L)
Diffusion of hydrogen in palladium, P. A. Silberg and C. H. Bachman—778
Electroconvectional heat transfer in gases, Sigurds Arajs and Sam Legvold—531
Errata: Nodal equation of state and phase transitions in fluids, Emmanuel Meeron—444(L)
Erratum: High-temperature gas viscosities. I. Nitrous oxide and oxygen, C. J. G. Raw and C. P. Ellis—1185(L)
Excitation of molecular vibration on collision, Morris Salkoff and Ernest Bauer—26
Free-convectional heat transfer from a single horizontal wire, Sigurds Arajs and Sam Legvold—697
Heat of sublimation of carbon and the dissociation energy of CO by x-ray densitometry of shock waves, H. T. Knight and J. P. Rink—449(L)
Internal energy-compressibility-temperature equation for air in dissociative and ionic equilibrium, Perrin Winchell —687
Kinetic theory of nonspherical molecules. III, Charles Muckenfuss and C. F. Curtiss—1257
Molecular collisions. I. Formal theory and the Pauli principle, George Gioumousis and C. F. Curtiss—996
Molecular diffusion studies in gases in high temperature. I. The point source technique, R. E. Walker and A. A. Westenberg—1139
Molecular diffusion studies in gases at high temperature. II. Interpretation of results on the He—N_2 and CO_2—N_2 systems, R. E. Walker and A. A. Westenberg—1147
Negative ion formation and electric breakdown in some halogenated gases, W. M. Hickam and D. Berg—517
Optical dispersion of gases in the infrared, J. H. Jaffe, M. A. Hirschfeld, and S. Kimel—675(L)
Radial distribution functions in binary gas mixtures, Ephraim L. Rubin and Benson R. Sundheim—278
Self diffusion in argon to 300 atmospheres, T. R. Mifflin and C. O. Bennett—975
Suction of the boundary-layer flow along a hot plate as a means of separating gas mixtures, V. C. Liu—967(L)
Thermal conductivity of multicomponent gas mixtures, Charles Muckenfuss and C. F. Curtiss—1273

Glasses

Concerning reconstructive transformation and formation of glass, David Turnbull and Morrel H. Cohen—1049
Nuclear magnetic resonance absorption in glass. I. Nuclear quadrupole effects in boron oxide, soda-boric oxide, and borosilicate glasses, A. H. Silver and P. J. Bray—984

High Pressures

Effect of pressure on the spectra of certain transition metal complexes, R. W. Parsons and H. G. Drickamer—930
Effect of pressure on the viscosity of higher hydrocarbons and their mixtures, Edward M. Griest, Wayne Webb, and Robert W. Schiessler—711
Effects of hydrostatic pressure on the intensity of the singlet-triplet transition of α-chloronaphthalene in ethyl iodide, W. W. Robertson and R. E. Reynolds—138
Investigation by nuclear magnetic resonance of the effects of pressure on the thermal transition and rotator phase of 2,2-dinitropropane, J. J. Billings and A. W. Nolle—214
Study of the compressions of several high molecular weight hydrocarbons, W. G. Cutler, R. H. McMickle, W. Webb, and R. W. Schiessler—727
Unusual temperature dependence of bromine quadrupole resonances in $TiBr_4$, R. G. Barnes and R. D. Engardt—248(L)

Intensities of Spectra

Absolute infrared intensities in gaseous and liquid CS_2, P. N. Schatz—959(L)
Absolute infrared intensities of the fundamental vibrations of NF_3, Paul N. Schatz and Ira. W. Levin—475
Effect of pressure on the spectra of certain transition metal complexes, R. W. Parsons and H. G. Drickamer—930
Infrared absorption intensities of hexafluorobenzene, D. Steele and D. H. Whiffen—1194(L)
Infrared absorption of cyanogen in the cesium iodide region and CN bond moment, Tatsuo Miyazawa—421
Infrared emissivity of NO in high temperature air, R. G. Breene, Jr.—512
Line widths and integrated absorption coefficients for the ultraviolet bands of OH, Walter E. Kaskan—1420(L)
Oscillator strength of absorption band in dye molecules, Hans Kuhn—958(L)
Perpendicular bands of allene and allene-d_4, John Overend and Bryce Crawford, Jr.—1002
Potential function of NF_3, Paul N. Schatz—481
Rotational isomerism in 1-fluoro-1,1,2,2-tetrachloroethane, R. E. Kagarise—680(L)
Spectra of homologous series of monosubstituted amides, M. Beer, H. B. Kessler, and G. B. B. M. Sutherland—1097
Upper limit to the intensity of the 3400 A singlet-triplet absorption in benzene, D. P. Craig, J. M. Hollas, and G. W. King—974(L)
Vibration-rotation bands of ammonia. III. The region 3.2–4.3 microns, W. S. Benedict, Earle K. Plyler, and E. D. Tidwell—829
Vibrational intensities. X. Integration theorems, Bryce Crawford, Jr.—1042
Vibrational spectra of the crystalline methyl halides, David A. Dows—484

Isotope Effects

Determination of molecular structures from ground-state rotational constants, C. C. Costain—864
Errata: Electron spin resonance of N^{15}-nitrobenzene negative ion, Raymond L. Ward and Melvin P. Klein—678(L)
Erratum: Second-order sum rule for the vibrations of isotopic molecules and the second rule of the mean, Jacob Bigeleisen—237(L)
Evaluation of force constants of plane XY_3 molecules from vibrational data, C. W. F. T. Pistorius—1174
Hydrogen-deuterium exchange reaction in fibrous proteins. I, R. D. B. Fraser and T. P. McRae—1024
Infrared spectra of partially deuterated diboranes, Walter J. Lehmann, Jerome F. Ditter, and I. Shapiro—1248
Mechanism of the Lewis-Rayleigh nitrogen afterglow, K. D. Bayes and G. B. Kistiakowsky—949(L)
Origin of ultrasonic relaxation in chemically active media, G. S. Verma—1186(L)
Spectra of homologous series of monosubstituted amides, M. Beer, H. B. Kessler, and G. B. B. M. Sutherland—1097
Suction of the boundary-layer flow along a hot plate as a means of separating gas mixtures, V. C. Liu—967(L)

Symmetrization of secular determinant for normal vibration calculation, Tatsuo Miyazawa—246(L)

Isotopes

Hydrogen→deuterium exchange reaction in fibrous proteins. I, R. D. B. Fraser and T. P. MacRae—1024
Statistical mechanical theory of solutions, R. M. Mazo—1122

Kinetics of Reaction

Asymmetric charge exchange reactions, S. B. Karr apatro and T. P. Das—240(L)
Bond rupture of HBr^{80m} following nuclear isomeric transition, Ray H. Luebbe, Jr., and John E. Willard—124
Diffusion and chemical kinetics. Integration of the probability after-effect equation for a spherical volume element, John Rehner, Jr.—962(L)
Diffusion and heterogeneous reaction. I. The dynamics of radical reactions, Henry Wise and Clarence M. Ablow—634
Energies and entropies of activation in chlorine atom reactions, P. Goldfinger, M. Jeunehomme, and G. Martens—456(L)
Energy of dissociation of the C—H bond in the formyl radical, Ralph Klein and Louis J. Schoen—953(L)
Errata: Absorption and dispersion of sound in chemically reacting fluids, R. M. Mazo—1186(L)
Errata: Ion exchange kinetics. A nonlinear diffusion problem, F. Helfferich and M. S. Plesset—679(L)
Errata: Studies in nonequilibrium rate processes. III. The vibrational relaxation of a system of anharmonic oscillators, Norman W. Bazley and Elliott W. Montroll—1185(L)
Formation of nitrous oxide from nitrogen atoms, P. Harteck and S. Dondes—234(L)
Free-radical stabilization in condensed phases, Sidney Golden—61
Gaseous detonations. XI. Double waves, Mark Cher and G. B. Kistiakowsky—506
High-speed computations in the kinetics of free-radical degradation. I. Random initiation, R. Simha, L. A. Wall, and J. Bram—894
Infrared chemiluminescence from the gaseous reaction atomic H· plus Cl_2, J. K. Cashion and J. C. Polanyi—455(L)
Interrelations involving solutions of equations of equalizing processes and oscillating processes, D. G. O'Sullivan—689
Ion exchange kinetics. A nonlinear diffusion problem. II. Particle diffusion controlled exchange of univalent and bivalent ions, M. S. Plesset, F. Helfferich, and J. N. Franklin—1064
Isomerization of *sym*-cyclopropane-d_2, Felix T. Smith—235(L)
Kinetic studies of hydroxyl radicals in shock waves. II. Induction times in the hydrogen-oxygen reaction, G. L. Schott and J. L. Kinsey—1177
Kinetics of decomposition of isobutyryl peroxide and reactions of isopropyl radicals, J. Smid and M. Szwarc—432
Kinetics of nitrogen atom recombination, John T. Herron, J. L. Franklin, Paul Bradt, and Vernon H. Dibeler—230(L)
Mass spectrometric detection of triazene and tetrazene and studies of the free radicals NH_2 and N_2H_3, S. N. Foner and R. L. Hudson—442(L)
Matrix isolation studies: possible infrared spectra of isomeric forms of diazomethane and of methylene, CH_2, Dolphus E. Milligan and George C. Pimentel—1405
Nitrogen atomic recombination at room temperature, Tunis Wentink, Jr., John O. Sullivan, and Kurt L. Wray—231(L)
NMR and hyperfine interactions in paramagnetic solutions, R. G. Shulman—945
1,2- *versus* 1,4- addition to 1,3-butadiene by a simple LCAO-MO method, Frank L. Pilar—1119
Origin of ultrasonic relaxation in chemically active media, G. S. Verma—1186(L)
Photolysis of nitromethane and of methyl nitrite in an argon matrix; infrared detection of nitroxyl, HNO, Harmond W. Brown and George C. Pimentel—883
Pseudo-energy transfer in some unimolecular decompositions, M. Szwarc and L. Herk—438
Radiation stability of liquid cyclooctatetraene, Shoji Shida, Hideo Yamazaki, and Shigeyoshi Arai—245(L)
Rate of recombination of nitrogen atoms, Paul Harteck, Robert R. Reeves, and Gene Mannella—608
Reaction of methyl radicals with ethylene, R. K. Brinton—782
Reaction of oxygen atoms with nitric oxide, Paul Harteck, Robert R. Reeves, and Gene Mannella—1333
Reaction rates and affinities, Pierre Van Rysselberghe—640
Reactions of gaseous molecule ions with gaseous molecules. IV. Experimental method and results, D. P. Stevenson and D. O. Schissler—282
Reactions of gaseous molecule ions with gaseous molecules. V. Theory, George Gioumousis and D. P. Stevenson—294
Some precursors produced in the electrodeless discharge synthesis of B_2Cl_4, R. T. Holzmann and W. F. Morris—677(L)
Stability of the formyl radical, Jack G. Calvert—954(L)
Statistical computation of reaction probabilities, F. T. Wall, L. A. Hiller, Jr., and J. Mazur—255
Statistical theory of chemical reaction rates, James C. Keck—410
Study of the protolysis kinetics of ammonium ion in aqueous solution by proton magnetic resonance technique, S. Meiboom, A. Loewenstein, and S. Alexander—969(L)

Light Scattering

Effect of anisotropy on light scattering by streaming freely flexible linear macromolecules, A. F. Stevenson and Hari L. Bhatnagar—1336
Theoretical investigations on the light scattering of colloidal spheres. IV. Specific turbidities in the lower microscopic range and fine structure phenomena, Wilfried Heller and H. James McCarty—78

Liquids

Absolute infrared intensities in gaseous and liquid CS_2, P. N. Schatz—959(L)
Calculation of the radial distribution function from the cell theory of liquids, John S. Dahler—1082
Compressibility of liquid mixtures in relation to conformal solution theory, V. S. Venkatasubramanian—971(L)
Concerning reconstructive transformation and formation of glass, David Turnbull and Morrel H. Cohen—1049
Correction to the viscoelectric constant, John Hart—960(L)
Effect of electrostatic fields on the orientation of colloidal particles immersed in shear flow, S. T. Demetriades—1054
Effect of pressure on the viscosity of higher hydrocarbons and their mixtures, Edward M. Griest, Wayne Webb, and Robert W. Schiessler—711
Effects of hydrostatic pressure on the intensity of the singlet-triplet transition of α-chloronaphthalene in ethyl iodide, W. W. Robertson and R. E. Reynolds—138
Errata: Nodal equation of state and phase transitions in fluids, Emmanuel Meeron—444(L)

Liquids (continued)

Errata: Self-diffusion coefficient and viscosity in liquids, James C. M. Li—1421(L)

Microwave absorption and molecular structure in liquids. XXIV. Dielectric relaxation of liquid ammonia, Kenneth Fish, Robert C. Miller, and Charles P. Smyth—745

Nuclear magnetic resonance or molten and solid thallium salts, T. J. Rowland and J. Phillip Bromberg—626

Proton resonance observation of mechanical destruction of magnetic ordering in liquid crystals, John Hubert Muller and R. D. Spence—1195(L)

Quantum statistical theory of plasmas and liquid metals, Robert D. Cowan and John G. Kirkwood—264

Radiation stability of liquid cyclooctatetraene, Shoji Shida, Hideo Yamazaki, and Shigeyoshi Arai—245(L)

Random events in a liquid, R. E. Turner—856

Statistical mechanical theory of transport processes in liquids, Frank C. Collins and Helen Raffel—699

Structure of liquid germanium dioxide, J. D. Mackenzie—605

Study of the compressions of several high molecular weight hydrocarbons, W. G. Cutler, R. H. McMickle, W. Webb, and R. W. Schiessler—727

Theory of orientational effects and related phenomena in dielectric liquids, A. Piekara and S. Kielich—1297

Thermal conductivity of liquid ozone, Thomas E. Waterman, Donald P. Kirsh, and Robert I. Brabets—905

Magnetic Resonance

Anomalous magnetic behavior in a single crystal of $Cu(NH_3)_4SO_4 \cdot H_2O$ at liquid helium temperatures, Takashi Watanabe and Taiichiro Haseda—1429(L)

Calculation of nuclear magnetic resonance spectra of aromatic hydrocarbons, C. E. Johnson, Jr., and F. A. Bovey—1012

Carbon-13 nuclear resonance spectrum and low-frequency infrared spectrum of iron pentacarbonyl, F. A. Cotton, A. Danti, J. S. Waugh, and R. W. Fessenden—000(L)

Detection of triplet molecules in solution by electron spin resonance, S. I. Weissman—1189(L)

Deuterium isotope effect in proton nuclear resonance spectroscopy, George Van Dyke Tiers—963(L)

Electron spin resonance in transition metal chelates. I. Copper (II) *bis*-acetylacetonate, A. H. Maki and B. R. McGarvey—31

Electron spin resonance in transition metal chelates. II. Copper (II) *bis*-salicylaldehyde-imine, A. H. Maki and B. R. McGarvey—35

Electron spin resonance studies of photochromic solids, H. S. Gutowsky, R. L. Rutledge, and I. Moyer Hunsberger—1183(L)

Errata: Electron spin resonance of N^{15}-nitrobenzene negative ion, Raymond L. Ward and Melvin P. Klein—678(L)

Erratum: High-resolution NMR spectrum of liquid propane, P. T. Narasimhan, N. Laine, and M. T. Rogers—1184(L)

Evaluation of matrix elements of the high resolution NMR spin Hamiltonian, P. L. Corio—682(L)

Free rotation in solids at 4.2°K, Harden M. McConnell—1422(L)

Generalized Bloch-type equations for chemical exchange, Jerome I. Kaplan—462(L)

Investigation by nuclear magnetic resonance of the effects of pressure on the thermal transition and rotator phase of 2,2-dinitropropane, J. J. Billings and A. W. Nolle—214

Isotropic nuclear resonance shifts, Harden M. McConnell and Richard E. Robertson—1361

Molecular motion in polypropylene, isotactic and atactic, W. P. Slichter and Elaine R. Mandell—232(L)

Molecular-orbital treatment of isotropic hyperfine interactions in simple aliphatic radicals, Donald B. Chesnut—43

NMR and hyperfine interactions in paramagnetic solutions, R. G. Shulman—945

Nuclear magnetic resonance absorption in glass. I. Nuclear quadrupole effects in boron oxide, soda-boric oxide, and borosilicate glasses, A. H. Silver and P. J. Bray—984

Nuclear magnetic resonance of proton dilute silica gel and silica-aluminas, D. E. O'Reilly, Harry P. Leftin, and W. Keith Hall—970(L)

Nuclear magnetic resonance of sodium-ammonia solutions, Kenneth S. Pitzer—453(L)

Nuclear magnetic resonance or molten and solid thallium salts, T. J. Rowland and J. Phillip Bromberg—626

Nuclear resonance study of structure and molecular motions in some cobalt complex salts, G. R. Murray, Jr., and J. S. Waugh—207

On Das' theory of nuclear magnetic resonance in solids, J. W. McGrath and A. A. Silvidi—103

Overhauser effect in manganese solutions in low magnetic fields, R. S. Codrington and N. Bloembergen—600

Paramagnetic resonance absorption in naphthalene in its phosphorescent state, Clyde A. Hutchison, Jr., and Billy W. Mangum—952(L)

Paramagnetic resonance in rare earth trichlorides, Clyde A. Hutchison, Jr., and Eugene Wong—754

Paramagnetic resonance of vanadyl etioporphyrin I, D. E. O'Reilly—1188(L)

Proton nuclear magnetic resonance chemical shifts, R. E. Glick and S. J. Ehrenson—459(L)

Proton resonance in dioptase $(CuSiO_3 \cdot H_2O)_6$, R. D. Spence and J. H. Muller—961(L)

Proton resonance observation of mechanical destruction of magnetic ordering in liquid crystals, John Hubert Muller and R. D. Spence—1195(L)

Radiation effects in two organic solids, R. G. Bennett, R. L. McCarthy, B. Nolin, and J. Zimmerman—249(L)

Reinterpretation of nuclear magnetic resonance spectra of decaborane, R. E. Williams and I. Shapiro—677(L)

Spin density matrix for the allyl radical, Harden M. McConnell—244(L)

Spin exchange and spin-lattice relaxation induced by mechanical rotation of solids, D. E. Woessner and H. S. Gutowsky—804

Structural isomer discrimination between cyanamides and carbodiimides by nitrogen nuclear magnetic resonance, James D. Ray, Lawrence H. Piette, and Donald P. Hollis—1022

Study of hydrogen bonding in systems of hydroxylic compounds in carbon tetrachloride through the use of NMR, Martin Saunders and James B. Hyne—1319

Study of the protolysis kinetics of ammonium ion in aqueous solution by proton magnetic resonance technique, S. Meiboom, A. Loewenstein, and S. Alexander—969(L)

T_1/T_2 ratio for protons in aqueous Mn^{++} solutions, James King and Norman Davidson—787

Trimeric association of *t*-butanol by NMR, M. Saunders and J. B. Hyne—253(L)

Zero field splittings in atomic nitrogen at 4.2°K, Terry Cole and Harden M. McConnell—451(L)

Magnetic Susceptibilities

Anomalous magnetic behavior in a single crystal of $Cu(NH_3)_4SO_4 \cdot H_2O$ at liquid helium temperatures, Takashi Watanabe and Taiichiro Haseda—1429(L)

Errata: Paramagnetism in diamagnetic molecules, William Weltner, Jr.—1185(L)

Improved simple analytical wave functions for atoms, Antony F. Saturno and Robert G. Parr—490

Magnetic susceptibility of ferrous ammonium tutton salt at liquid helium temperatures, J. T. Richardson and R. C. Sapp—337
Mobile electron model in a magnetic field, John A. Weil—792
Solutions of sulfur in fused salts, Jacob Greenberg, Benson R. Sundheim, and Dieter M. Gruen—461(L)

Mass Spectra

Calculated calibration points for negative ion appearance potentials, Lewis M. Branscomb—452(L)
Determination of the O—O bond energy in hydrogen peroxide by electron impact, L. P. Lindeman and J. C. Guffy—247(L)
Dissociation of formic acid and deuteroformic acids by ion-molecule collision, C. E. Melton and Gus A. Ropp—400
Electron capture processes in the hydrogen halides, D. C. Frost and C. A. McDowell—503
Electron impact studies of sulfur dioxide and sulfuryl fluoride, Robert M. Reese, Vernon H. Dibeler, and J. L. Franklin—880
Formation of the I^- ion from I_2 by resonance capture, D. C. Frost and C. A. McDowell—964(L)
Kinetics of nitrogen atom recombination, John T. Herron, J. L. Franklin, Paul Bradt, and Vernon H. Dibeler—230(L)
Mass spectra of some simple esters and their interpretation by quasi-equilibrium theory, A. Bruce King and F. A. Long—374
Mass spectrometric detection of triazene and tetrazene and studies of the free radicals NH_2 and N_2H_3, S. N. Foner and R. L. Hudson—442(L)
Mass spectrometric observation of triatomic ions in chlorine and bromine gases, C. E. Melton, Gus A. Ropp, and P. S. Rudolph—968(L)
Mass spectrometric study of ferrous chloride vapor, Richard C. Schoonmaker and Richard F. Porter—116
Mass spectrometric study of the vaporization of LiF, NaF, and LiF—NaF mixtures, Richard F. Porter and Richard C. Schoonmaker—1070
Measurement of ionization potentials by electron impact, A. J. C. Nicholson—1312
Negative ion formation and electric breakdown in some halogenated gases, W. M. Hickam and D. Berg—517
Negative ion formation by an electron capture process in nitric oxide: the dissociation energy of the nitric oxide molecule, D. C. Frost, and C. A. McDowell—1424(L)
Polymeric gaseous molecules in the vaporization of alkali halides, Joseph Berkowitz and William A. Chupka—653
Reactions of gaseous molecule ions with gaseous molecules. IV. Experimental method and results, D. P. Stevenson and D. O. Schissler—282
Reactions of gaseous molecule ions with gaseous molecules. V. Theory, George Gioumousis and D. P. Stevenson—294
Standard enthalpy and free energy of formation of diimide, P. Smith—683 (L)
Thermodynamic study of SiC utilizing a mass spectrometer, J. Drowart, G. De Maria, and Mark G. Inghram—1015

Mechanics, Classical

Symmetrization of secular determinant for normal vibration calculation, Tatsuo Miyazama—246(L)

Mechanics, Quantum

Application of Schwarz's inequality to perturbation theory, B. F. Gray—276
Approximate analytical solution of the Schrödinger equation for the Thomas-Fermi potential for the *s* states, T. Tietz—684(L)
Approximate calculation of eigenfunctions, B. F. Gray—1246
Approximate calculations of eigenvalues with special reference to the helium atom, B. F. Gray—272
Asymmetric charge exchange reactions, S. B. Karmohapatro and T. P. Das—240(L)
Calculation of the energies of triatomic hydrogen using a modified Roothaan procedure, Willard E. Meador, Jr.—1339
Comparison of theoretical and experimental electron collision cross sections for three excitations in helium, S. M. Silverman and E. N. Lassettre—891
Correlation correction study of CH, NH, and OH, M. Krauss and J. F. Wehner—1287
Electronic structure of BH_3, William L. Clinton and Bernard Rice—445(L)
Electronic structure of diborane, Walter C. Hamilton—460(L)
Electronic structure of LiH. III. The Knipp wave function, Fred T. Ormand and F. A. Matsen—100
Electronic structure of LiH. IV. Hydrogen atom polarization, Oscar Platas and F. A. Matsen—965(L)
Energy levels, atom populations, bond populations in the LCAO MO model and in the FE MO model. A quantitative comparison, Norman S. Ham and Klaus Ruedenberg—1199
Enhancement of infrared absorption bands of charge transfer complexes, E. E. Ferguson and F. A. Matsen—105
Errata: Electronic interaction in the free-electron network model for conjugated systems. I. Theory, Norman S. Ham, and Klaus Ruedenberg—237(L)
Evaluation of matrix elements of the high-resolution NMR spin Hamiltonian, P. L. Corio—682(L)
Evaluation of two-center exchange integrals, G. E. Tauber—300
Excitation of molecular vibration on collision, Morris Salkoff and Ernest Bauer—26
Generalized united-atom theory of molecules. I. Spherical contributions in the $s\sigma$ wave functions for H_2^+, Tien Chi Chen—347
Generalized united atom theory. II. A one-center model for cyclic polyenes, Tien Chi Chen—356
Higher-order rotation-vibration energies of polyatomic molecules. IV, Gilbert Amat and Harald H. Nielsen—665
Improved simple analytical wave functions for atoms, Antony F. Saturno and Robert G. Parr—490
Mobile bond orders in conjugated systems, Norman S. Ham and Klaus Ruedenberg—1215
Mobile bond orders in the resonance and molecular orbital theories, Norman S. Ham—1229
Mobile electron model in a magnetic field, John A. Weil—792
Molecular collisions. I. Formal theory and the Pauli principle, George Gioumousis and C F. Curtiss—996
Molecular orbital study of Be_4, Robert D. Cloney and John S. Dooling—425
Molecular-orbital treatment of isotropic hyperfine interactions in simple aliphatic radicals, Donald B. Chesnut—43
Morse potentials for excited states of diatomic molecules, Robert W. Keyes—523
Nuclear magnetic resonance of sodium-ammonia solutions, Kenneth S. Pitzer—453(L)
1,2- *versus* 1,4- addition to 1,3-butadiene by a simple LCAO-MO method, Frank L. Pilar—1119
Open configuration calculations for beryllium, G. H. Brigman, R. P. Hurst, J. D. Gray, and F. A. Matsen—251(L)
Pi electron correlation in the polyenes, M. J. S. Dewar and C. E. Wulfman—158

Mechanics, Quantum (continued)

Quantum mechanical calculation of one-electron properties. I. General formulation, Martin Karplus, Aron Kuppermann, and Leonard M. Isaacson—1240

Search for metastable states of the doubly excited negative hydrogen ion, E. Holøien—676(L)

Semiempirical calculation on the electronic structure of the nitrogen-containing heterocyclic molecules. I. General theory, Tosinobu Anno—1161

Semiempirical calculation on the electronic structure of the nitrogen-containing heterocyclic molecules. II. Electronic structure of pyrazine with particular reference to its π—π transition, Tosinobu Anno and Akira Sadô—1170

Spin density matrix for the allyl radical, Harden M. McConnell—244(L)

Spin-orbit coupling in the $^3A_2$—$^1A_1$ transition of formaldehyde, Jerome W. Sidman—644

Study of the NH radical by the LCAO—SCF molecular orbital method, Marjorie E. Boyd—108

Theorem on the mobile bond orders of alternant conjugated systems, Klaus Ruedenberg—1232

Theory of electronic-vibrational interaction for rare earth and actinide series ions in crystals. II. Octahedral complexes, Robert A. Satten—658

Use of 4*p*-orbitals in metal-aromatic complexes, David A. Brown—1086

Vibronically induced absorption of forbidden infrared transitions, Walter R. Thorson—938

Mechanics, Statistical

Calculation of the radial distribution function from the cell theory of liquids, John S. Dahler—1082

Errata: Absorption and dispersion of sound in chemically reacting fluids, R. M. Mazo—1186(L)

Errata: Nodal equation of state and phase transitions in fluids, Emmanuel Meeron—444(L)

Errata: Studies in nonequilibrium rate processes. III. The vibrational relaxation of a system of anharmonic oscillators, Norman W. Bazley and Elliott W. Montroll—1185(L)

Errata: Theory of helix-coil transitions in polypeptides, J. H. Gibbs and E. A. DiMarzio—679(L)

Errata: Theory of potentials of average force and radial distribution functions in ionic solutions, Emmanuel Meeron—444(L)

Expression in terms of molecular distribution functions for the entropy density in an infinite system, R. E. Nettleton and M. S. Green—1365

Kinetic theory of nonspherical molecules. III, Charles Muckenfuss and C. F. Curtiss—1257

Quantum statistical theory of plasmas and liquid metals, Robert D. Cowan and John G. Kirkwood—264

Radial distribution functions in binary gas mixtures, Ephraim L. Rubin and Benson R. Sundheim—278

Random events in a liquid, R. E. Turner—856

Screened interactions of neighbor-ions and symmetry properties of titration curves in polyelectrolytes, J. Warga and Shneior Lifson—643

Small perturbations in solution theory, Frank P. Buff and Fred M. Schindler—1075

Statistical mechanical theory of solutions, R. M. Mazo—1122

Statistical mechanical theory of the thermal conductivity of binary liquid solutions, Richard J. Bearman—1278

Statistical mechanical theory of transport processes in liquids, Frank C. Collins and Helen Raffel—699

Statistical mechanics of irreversible processes in polymer solutions, Jerome J. Erpenbeck and John G. Kirkwood—909

Statistical thermodynamics of polymer solutions. I. Theory of the second virial coefficient for a homogeneous solute, Edward F. Casassa and Hershel Markowitz—493

Statistical-kinetic theory of phase change, Louis Gold—51

Theorem of corresponding states and its application to mixtures, Stuart A. Rice—141

Theory of diffusion near walls, Marshall Fixman—540

Theory of dilute polymer solution. II. Osmotic pressure and frictional properties, Michio Kurata and Hiromi Yamakawa—311

Thermal conductivity of multicomponent gas mixtures, Charles Muckenfuss and C. F. Curtiss—1273

Three new partition functions in statistical mechanics, Terrell L. Hill—1423(L)

Metals

Compressibilities of simple metals, W. G. McMillan and A. L. Latter—15

Diffusion of hydrogen in palladium, P. A. Silberg and C. H. Bachman—778

Lattice dynamics of hexagonal close-packed metals. III, L. J. Slutsky—1191(L)

Temperature dependence of the phase transition in cerium, R. Herman and C. A. Swenson—398

Molecular Beams

Vibrational energy exchange between diatomic molecules and a surface, Robert Herman and Robert J. Rubin—591

Molecular Structure and Constants (see also Absorption Spectra, Fluorescence, Raman Spectra, Electron and X-Ray Diffraction)

Absolute infrared intensities of the fundamental vibrations of NF_3, Paul N. Schatz and Ira. W. Levin—475

Absorption spectrum of rubidium in the presence of isomeric hydrocarbons, Oleg Jefimenko and Joel Anderson Gwinn—148

Anharmonic constant x_{22} of $N^{14}O_2$, J. W. Keller and A. H. Nielsen—252(L)

Application of charge transfer theory to the heats of adsorption of the inert gases on charcoal, D. G. Tuck—724

Bond dissociation energy of the C_6H_5—F bond, P. Smith—681(L)

Calculation of nuclear magnetic resonance spectra of aromatic hydrocarbons, C. E. Johnson, Jr., and F. A. Bovey—1012

Calculation of the energies of gaseous alkali halide dimer molecules, Thomas A. Milne and Daniel Cubicciotti—846

Carbon-13 nuclear resonance spectrum and low-frequency infrared spectrum of iron pentacarbonyl, F. A. Cotton, A. Danti, J. S. Waugh, and R. W. Fessenden—1427(L)

Changes in the near ultraviolet spectrum of crystalline hexamethylbenzene accompanying a low temperature phase transition, O. Schnepp—56

Characteristic B—H stretching frequencies in alkydiboranes, I. Shapiro, C. O. Wilson, and W. J. Lehmann—237(L)

Determination of molecular structures from ground state rotational constants, C. C. Costain—864

Determination of the binding energy of He_2^+ from ion scattering data, Edward A. Mason and Joseph T. Vanderslice—361

Determination of transition moment orientation in partially oriented polymers, R. D. B. Fraser—1428(L)

Deuterium isotope effect in proton nuclear resonance spectroscopy, George Van Dyke Tiers—963(L)

Dielectric properties of polypeptide solutions. I. The electric dipole moment of α helix in dioxane, Akiyoshi Wada—674(L)

Dipole moment of ammonia-borane, J. R. Weaver, S. G. Shore, and R. W. Parry—1

Dispersion of the electro-optic Kerr effect in the infrared region, Elliot Charney and Ralph S. Halford—221

Effective symmetries of electrical fields about ions in solution, Donald C. Miller, Edward V. Sayre, and Simon Freed—454(L)

Electric strength, molecular structure and ultraviolet spectra of hydrocarbon gases, A. E. D. Heylen—813

Electron capture processes in the hydrogen halides, D. C. Frost and C. A. McDowell—503

Electron spin resonance in transition metal chelates. I. Copper II bis-acetylacetonate, A. H. Maki and B. R. McGarvey—31

Electron spin resonance in transition metal chelates. II. Copper (II) bis-salicylaldehyde-imine, A. H. Maki and B. R. McGarvey—35

Electronic structure of BH_3, William L. Clinton and Bernard Rice—445(L)

Energies involved in reorienting hydration shells of ions, Warren L. Reynolds—851

Energy levels, atom populations, bond populations in the LCAO MO model and in the FE MO model. A quantitative comparison, Norman S. Ham and Klaus Ruedenberg—1199

Energy of dissociation of the C—H bond in the formyl radical, Ralph Klein and Louis J. Schoen—953(L)

Entropies and energies of dimerization of alkali metal halides, S. H. Bauer, R. M. Diner, and R. F. Porter—991

Errata: Paramagnetism in diamagnetic molecules, William Weltner, Jr.—1185(L)

Errata: Theory of helix-coil transitions in polypeptides, J. H. Gibbs and E. A. DiMarzio—679(L)

Evaluation of force constants of plane XY_3 molecules from vibrational data, C. W. F. T. Pistorius—1174

Evaluation of matrix elements of the high-resolution NMR spin Hamiltonian, P. L. Corio—682(L)

Force constants of the P_4 molecule, C. W. F. T. Pistorius—(L)

Ground state inversion spectrum of $N^{14}D_3$, Gabriel Herrmann—875

Infrared absorption associated with strong hydrogen bonds, Norman Albert and Richard M. Badger—1193(L)

Infrared absorption of cyanogen in the cesium iodide region and CN bond moment, Tatsuo Miyazawa—421

Infrared spectra of partially deuterated diboranes, Walter J. Lehmann, Jerome F. Ditter, and I. Shapiro—

Infrared spectra of the alkaline-earth halides. I. Beryllium fluoride, beryllium chloride, and magnesium chloride, Alfred Büchler and William Klemperer—121

Interaction energies of next-nearest neighbors, Thomas L. Allen—951(L)

Internal barrier in ethane, David R. Lide, Jr.—1426(L)

Internal barrier of propylene oxide from the microwave spectrum. II, Dudley R. Herschbach and Jerome D. Swalen—761

Intramolecular twisting effects in substituted benzenes. II. Ground-state properties, Eion G. McRae and Lionel Goodman—334

Isomerization of *sym*-cyclopropane-d_2, Felix T. Smith—235(L)

Ligand field theory of Ni(II) complexes. II. Electronic spectra and structure of some paramagnetic chelates, Gilda Maki—162

Ligand field theory of Ni(II) complexes. III. Electronic spectra and solution paramagnetism of some diamagnetic Ni(II) complexes, Gilda Maki—1129

Mass spectrometric detection of triazene and tetrazene and studies of the free radicals NH_2 and N_2H_3, S. N. Foner and R. L. Hudson—442(L)

Mass spectrometric study of ferrous chloride vapor, Richard C. Schoonmaker and Richard F. Porter—116

Mass spectrometric study of the vaporization of LiF, NaF, and LiF-NaF mixtures, Richard F. Porter and Richard C. Schoonmaker—1070

Matrix isolation studies: possible infrared spectra of isomeric forms of diazomethane and of methylene, CH_2, Dolphus E. Milligan and George C. Pimentel—1405

Mean amplitudes of vibration in allene and allene-d_4 molecules. I, Sven J. Cyvin—583

Microwave spectra of molecules exhibiting internal rotation. IV. Isobutane, tertiary butyl fluoride, and trimethylphospine, David R. Lide, Jr. and D. E. Mann—914

Microwave spectrum, internal barrier, structure, equilibrium configuration, and dipole moment of methyl monofluorosilane, Louis Pierce—383

Microwave spectrum, structure, dipole moment, and quadrupole coupling constant of propargyl chloride, Eizi Hirota, Takeshi Oka, and Yonezo Morino—444(L)

Microwave studies of the structure of cyclopropyl derivatives, James P. Friend and B. P. Dailey—577

Model of the helix-coil transition in macromolecules. II. Stuart A. Rice and Akiyoshi Wada—233(L)

Molecular composition of alkali fluoride vapors, M. Eisenstadt, G. M. Rothberg, and P. Kusch—797

Molecular orbital study of Be_4, Robert D. Cloney and John S. Dooling—425

Molecular-orbital treatment of isotropic hyperfine interactions in simple aliphatic radicals, Donald B. Chesnut—43

Molecular structure and vibrational spectra of alkali halide dimers, Joseph Berkowitz—1386

Morse potentials for excited states of diatomic molecules, Robert W. Keyes—523

Negative ion formation and electric breakdown in some halogenated gases, W. M. Hickam and D. Berg—517

Negative ion formation by an electron capture process in nitric oxide: the dissociation energy of the nitric oxide molecule, D. C. Frost and C. A. McDowell—1424(L)

Neighbor interactions and internal rotations in polymer molecules. I. Stereospecific structure and average dimensions, Shneior Lifson—80

Neighbor interactions and internal rotations in polymer molecules. II. Polyelectrolytes, Shneior Lifson—89

Normal vibrations of *N*-methylacetamide, Tatsuo Miyazawa, Takehiko Shimanouchi, and San-ichiro Mizushima—611

Paramagnetic resonance study of irradiated glasses of methanol and ethanol, Henry Zeldes and Ralph Livingston—

Perpendicular bands of allene and allene-d_4, John Overend and Bryce Crawford, Jr.—1002

Photolysis of nitromethane and of methyl nitrite in an argon matrix; infrared detection of nitroxyl, HNO, Harmond W. Brown and George C. Pimentel—883

Polymeric gaseous molecules in the vaporization of alkali halides, Joseph Berkowitz and William A. Chupka—653

Molecular Structure and Constants (see also Absorption Spectra, Fluorescence, Raman Spectra, Electron and X-Ray Diffraction) (continued)

Potential field and force constants of octahedral molecules, C. W. F. T. Pistorius—1328
Potential function of NF_2, Paul N. Schatz—481
Proton nuclear magnetic resonance chemical shifts, R. E. Glick and S. J. Ehrenson—459(L)
Pseudorotation in cyclopentane and related molecules, John P. McCullough—966(L)
Reinterpretation of nuclear magnetic resonance spectra of decaborane, R. E. Williams and I. Shapiro—677(L)
Rotational isomerism in 1-fluoro-1,1,2,2-tetrachloroethane, R. E. Kagarise—680(L)
Semiempirical calculation on the electronic structure of the nitrogen-containing heterocyclic molecules. I. General theory, Tosinobu Anno—1161
Semiempirical calculation on the electronic structure of the nitrogen-containing heterocyclic molecules. II. Electronic structure of pyrazine with particular reference to its $n-\pi$ transition, Tosinobu Anno and Akira Sadô—1170
Spectra of homologous series of monosubstituted amides, M. Beer, H. B. Kessler, and G. B. B. M. Sutherland—1097
Spectroscopic comparison of $\pi-\sigma$ to $\pi-\pi$ electron forces between benzene and various diluent molecules, W. W. Robertson, J. M. Robinson, and S. E. Babb, Jr.—243(L)
Stability of the formyl radical, Jack G. Calvert—954(L)
Structural isomer discrimination between cyanamides and carbodiimides by nitrogen nuclear magnetic resonance, James D. Ray, Lawrence H. Piette, and Donald P. Hollis—1022
Structure of potassium hydrogen maleate by neutron diffraction, S. W. Peterson and Henri A. Levy—948(L)
Substituted methanes. XXVIII. Infrared spectral data and assignments for $CHCl_2F$ and $ChClF_2$ and potential energy constants and calculated thermodynamic properties for $CHCl_2F$, $CDCl_2F$, $CHClF_2$, and $CDClF_2$, Herman B. Weissman, Arnold G. Meister, and Forrest F. Cleveland—72
Thermodynamic functions of carbon tetrachloride and monochloride, John S. Gordon—889
Torsional frequencies of 1,2-dihalogenoethanes, Isao Ichishima, Hideo Kamiyama, Takehiko Shimanouchi, and San-ichiro Mizushima—1190(L)
Triatomic linear molecules containing carbon and oxygen, sulfur, selenium, or tellurium. I. Vibrational spectra of CS_2, CSe_2, SCSe, and SCTe, Tunis Wentink, Jr.—188
Trimeric association of *t*-butanol by NMR, M. Saunders and J. B. Hyne—253(L)
Use of 4*p* orbitals in metal-aromatic complexes, David A. Brown—1086
Vibration frequencies of some tetrahedral hydride ions, David A. Brown—451(L)
Vibration-rotation bands of ammonia. III. The region 3.2–4.3 microns, W. S. Benedict, Earle K. Plyler, and E. D. Tidwell—829
Vibrational spectrum and structure of metal-cyanide complexes in the solid state. IV. $K_3Cu(CN)_4$, Llewellyn H. Jones—463
Vibrational spectrum of disilyl sulfide, H. Richard Linton and Eugene R. Nixon—921
Vibronically induced absorption of forbidden infrared transitions, Walter R. Thorson—938
Zeeman quadrupole spectrum of cyanuric chloride, F. J. Adrian—1381

Neutron Diffraction

Neutron diffraction study of gypsum, $CaSO_42H_2O$, Masao Atoji and R. E. Rundle—1306
Relation of magnetic disordering to the thermodynamics of solid metallic solutions, R. A. Oriani—679(L)
Structure of potassium hydrogen maleate by neutron diffraction, S. W. Peterson and Henri A. Levy—948(L)

Nuclear Quadrupole Resonance

Line width of the pure quadrupole resonance of chlorine in sodium chlorate, Tokujiro Fuke and Yoshitaka Kôi—973(L)
N^{14} quadrupole interaction with an asymmetric field gradient, P. A. Casabella and P. J. Bray—1105
Unusual temperature dependence of bromine quadrupole resonances in $TiBr_4$, R. G. Barnes and R. D. Engardt—248(L)
Zeeman quadrupole spectrum of cyanuric chloride, F. J. Adrian—1381

Nucleation

Thermodynamic driving force in nucleation and growth processes, John D. Hoffman—1192(L)

Phase Transitions

Changes in the near ultraviolet spectrum of crystalline hexamethylbenzene accompanying a low temperature phase transition, O. Schnepp—56
Errata: Theory of helix-coil transitions in polypeptides, J. H. Gibbs and E. A. DiMarzio—679(L)
Free-radical stabilization in condensed phases, Sidney Golden—61
Investigation by nuclear magnetic resonance of the effects of pressure on the thermal transition and rotator phase of 2,2-dinitropropane, J. J. Billings and A. W. Nolle—214
Model of the helix-coil transition in macromolecules. II, Stuart A. Rice and Akiyoshi Wada—233(L)
Molecular motion in polypropylene, isotactic and atactic, W. P. Slichter and Elaine R. Mandell—232(L)
Nuclear resonance study of structure and molecular motions in some cobalt complex salts, G. R. Murray, Jr., and J. S. Waugh—207
Size effect in heterogeneous nucleation, N. H. Fletcher—572
Statistical-kinetic theory of phase change, Louis Gold—51
Temperature dependence of the phase transition in cerium, R. Herman and C. A. Swenson—398

Photochemistry

Energy of dissociation of the C—H bond in the formyl radical, Ralph Klein and Louis J. Schoen—953(L)
Evaluation of quantum yields for polymer crosslinking and scission by light, Allan R. Shultz—200
Mass spectrometric observation of triatomic ions in chlorine and bromine gases, C. E. Melton, Gus A. Ropp, and P. S. Rudolph—968(L)
Photolysis of nitromethane and of methyl nitrite in an argon matrix; infrared detection of nitroxyl, HNO, Harmond W. Brown and George C. Pimentel—883
Radiation stability of liquid cyclooctatetraene, Shoji Shida, Hideo Yamazaki, and Shigeyoshi Arai—245(L)
Stability of the formyl radical, Jack G. Calvert—954(L)

Photoconductivity

Evidence for the triplet state in photoconductivity in anthracene, Barnett Rosenberg—1108
Organic photoconductors. IV. Sign of the charge carrier, R. C. Nelson—388
Photovoltaic effect and photoconductivity in laminated organic systems, David Kearns and Melvin Calvin—950(L)
Some aspects of photoconductivity in cadmium selenide crystals, Richard H. Bube and Lucian A. Barton—128

Polymers

Determination of transition moment orientation in partially oriented polymers, R. D. B. Fraser—1428(L)

Effect of anisotropy on light scattering by streaming freely flexible linear macromolecules, A. F. Stevenson and Hari L. Bhatnagar—1336
Effect of humidity on the dynamic moduli of nylon 6-6 monofilaments, B. A. Dunell and J. M. R. Quistwater—450(L)
Errata: Theory of helix-coil transitions in polypeptides, J. H. Gibbs and E. A. DiMarzio—679(L)
Evaluation of quantum yields for polymer crosslinking and scission by light, Allan R. Shultz—200
High-speed computations in the kinetics of free-radical degradation. I. Random initiation, R. Simha, L. A. Wall, and J. Bram—894
Interpretation of chain-ring equilibria in the polymerization of substituted ϵ-caprolactam, Hirosuke Yumoto—1234
Molecular motion in polypropylene, isotactic and atactic, W. P. Slichter and Elaine R. Mandell—232(L)
Neighbor interactions and internal rotations in polymer molecules. I. Stereospecific structure and average dimensions, Shneior Lifson—80
Neighbor interactions and internal rotations in polymer molecules. II. Polyelectrolytes, Shneior Lifson—89
Oxygen effects in the radiation chemistry of polyethylene, L. E. St. Pierre and H. A. Dewhurst—241(L)
Radiation stability of liquid cyclooctatetraene, Shoji Shida, Hideo Yamazaki, and Shigeyoshi Arai—245(L)
Screened interactions of neighbor ions and symmetry properties of titration curves in polyelectrolytes, J. Warga and Shneior Lifson—643
Statistical mechanics of irreversible processes in polymer solutions, Jerome J. Erpenbeck and John G. Kirkwood—909
Statistical thermodynamics of polymer solutions. I. Theory of the second virial coefficient for a homogeneous solute, Edward F. Casassa and Hershel Markowitz—493
Theory of cold crystallization of high polymers, B. Wunderlich—1395
Theory of dilute polymer solution. II. Osmotic pressure and frictional properties, Michio Kurata and Hiromi Yamakawa—311
Trimeric association of *t*-butanol by NMR, M. Saunders and J. B. Hyne—253(L)

Proteins

Dielectric properties of polypeptide solutions. I. The electric dipole moment of α helix in dioxane, Akiyoshi Wada—674(L)
Hydrogen—deuterium exchange reaction in fibrous proteins. I, R. D. B. Fraser and T. P. McRae—1024
Spectra of homologous series of monosubstituted amides, M. Beer, H. B. Kessler, and G. B. B. M. Sutherland—1097

Radiation Chemistry

Bond rupture of HBr^{80m} following nuclear isomeric transition, Ray H. Luebbe, Jr., and John E. Willard—124
Oxygen effects in the radiation chemistry of polyethylene, L. E. St. Pierre and H. A. Dewhurst—241(L)
Radiation effects in two organic solids, R. G. Bennett, R. L. McCarthy, B. Nolin, and J. Zimmerman—249(L)
Radiation stability of liquid cyclooctatetraene, Shoji Shida, Hideo Yamazaki, and Shigeyoshi Arai—245(L)

Radiochemistry

Sputtering of silver by hydrogen ions, Cormac D. O'Briain, Amelie Lindner, and Walter J. Moore—3
Sputtering of silver by neutral beams of hydrogen and helium, Alarich Weiss, Lloyd Heldt, and Walter J. Moore—7

Raman Spectra

Force constants of the P_4 molecule, C. W. F. T. Pistorius—1421(L)
Neutron diffraction study of gypsum, $CaSO_42H_2O$, Masao Atoji and R. E. Rundle—
Note on the absorption of radiation by a cylindrical sample of a strong absorber, Edward A. Mason—1184(L)
Spectra of homologous series of monosubstituted amides, M. Beer, H. B. Kessler, and G. B. B. M. Sutherland—1097
Torsional frequencies of 1,2-dihalogenoethanes, Isao Ichishima, Hideo Kamiyama, Takehiko Shimanouchi, and San-ichiro Mizushima—1190(L)
Triatomic linear molecules containing carbon and oxygen, sulfur, selenium, or tellurium. I. Vibrational spectra of CS_2, CSe_2, SCSe, and SCTe, Tunis Wentink, Jr.—188
Vibration frequencies of some tetrahedral hydride ions, David A. Brown—451(L)
Vibrational spectrum of disilyl sulfide, H. Richard Linton and Eugene R. Nixon—921

Refractive Indexes

Dispersion of the electro-optic Kerr effect in the infrared region, Elliot Charney and Ralph S. Halford—221

Rotation

Hindered rotation in adsorbed hydrogen adiabatic cooling by adsorbed parahydrogen, Y. L. Sandler—97
Internal barrier in ethane, David R. Lide, Jr.—1426(L)
Internal barrier of propylene oxide from the microwave spectrum. II, Dudley R. Herschbach and Jerome D. Swalen—761
Investigation by nuclear magnetic resonance of the effects of pressure on the thermal transition and rotator phase of 2,2-dinitropropane, J. J. Billings and A. W. Nolle—214
Microwave spectrum, internal barrier, structure, equilibrium configuration, and dipole moment of methyl monofluorosilane, Louis Pierce—383
Neighbor interactions and internal rotations in polymer molecules. I. Stereospecific structure and average dimensions, Shneior Lifson—80
Neighbor interactions and internal rotations in polymer molecules. II. Polyelectrolytes, Shneior Lifson—89
Pseudorotation in cyclopentane and related molecules, John P. McCullough—966(L)
Relative intensities of microwave absorption lines, Peter H. Verdier and E. Bright Wilson, Jr.—340
Studies in nonequilibrium rate processes. IV. The rotational and vibrational relaxation of a system of rotating oscillators, Robert Herman and Kurt E. Shuler—366

Rotational Isomerism

Interpretation of chain-ring equilibria in the polymerization of substituted ϵ-caprolactam, Hirosuke Yumoto—1234
Rotational isomerism in 1-fluoro-1,1,2,2-tetrachloroethane, R. E. Kagarise—680

Scattering

Comparison of theoretical and experimental electron collision cross sections for three excitations in helium, S. M. Silverman and E. N. Lassettre—891
Determination of the binding energy of He_2^+ from ion scattering data, Edward A. Mason and Joseph T. Vanderslice—361

Shock Waves (see also Detonation)

Errata: Studies in nonequilibrium rate processes. III. The vibrational relaxation of a system of anharmonic oscillators, Norman W. Bazley and Elliott W. Montroll—1185(L)
Gaseous detonations. XI. Double waves, Mark Cher and G. B. Kistiakowsky—506

Shock Waves (see also Detonation) (continued)

Heat of sublimation of carbon and the dissociation energy of CO by x-ray densitometry of shock waves, H. T. Knight and J. P. Rink—449(L)
Kinetic studies of hydroxyl radicals in shock waves. II. Induction times in the hydrogen-oxygen reaction, G. L. Schott and J. L. Kinsey—1177
Schumann-Runge oxygen absorption in shock-heated air, W. H. Wurster, C. E. Treanor, and H. S. Glick—250(L)
Shock tube study of luminosity in xenon, Walter Roth and Per Gloersen—820

Solutions (see also Liquids)

Absorption spectrum of the nitrosonium ion, T. A. Turney and G. A. Wright—252(L)
Detection of triplet molecules in solution by electron spin resonance, S. I. Weissman—1189(L)
Dielectric properties of aqueous and alcoholic electrolytic solutions, J. B. Hasted and G. W. Roderick—17
Effective symmetries of electrical fields about ions in solution, Donald G. Miller, Edward V. Sayre, and Simon Freed—454(L)
Energies involved in reorienting hydration shells of ions, Warren L. Reynolds—851
Errata: Theory of potentials of average force and radial distribution functions in ionic solutions, Emmanuel Meeron—444(L)
Influence of oxygen on the transfer efficiency and fluorescent yield of organic solutions, V. Bar and A. Weinreb —1412
NMR and hyperfine interactions in paramagnetic solutions, R. G. Shulman—945
Nonstoichiometry in uranium dioxide, S. Aronson and J. Belle—151
Osmotic electric or magnetic field, Terrell L. Hill—1419(L)
Screened interactions of neighbor ions and symmetry properties of titration curves in polyelectrolytes, J. Warga and Shneior Lifson—643
Small perturbations in solution theory, Frank P. Buff and Fred M. Schindler—1075
Small-angle x-ray scattering from solutions of aerosol OT in nonaqueous media, L. A. Siegel—1091
Solubility of helium and neon in liquid argon. An approximation to the entropy of lattice vacancy formation in liquid argon, F. E. Karasz and G. D. Halsey, Jr.—173
Solutions of sulfur in fused salts, Jacob Greenberg, Benson R. Sundheim, and Dieter M. Gruen—461(L)
Statistical mechanical theory of solutions, R. M. Mazo—1122
Statistical mechanical theory of the thermal conductivity of binary liquid solutions, Richard J. Bearman—1278
Structure in ionic solutions. III, George W. Brady—1371
T_1/T_2 ratio for protons in aqueous Mn^{++} solutions, James King and Norman Davidson—787
Theorem of corresponding states and its application to mixtures, Stuart A. Rice—141
Theory of dilute polymer solution. II. Osmotic pressure and frictional properties, Michio Kurata and Hiromi Yamakawa—311
Ultrasonic absorption in $MnSO_4$ solutions, S. K. Kor and G. S. Verma—9

Surface Phenomena

Adsorption and diffusion of inert gases on tungsten, Robert Gomer—441(L)
Application of charge transfer theory to the heats of adsorption of the inert gases on charcoal, D. G. Tuck—724
Cleanup of atomic hydrogen, Katharine B. Blodgett—39
Diffusion and heterogeneous reaction. I. The dynamics of radical reactions, Henry Wise and Clarence M. Ablow—634
Diffusion and heterogeneous reaction. II. The catalytic activity of solids for hydrogen-atom recombination, Bernard J. Wood and Henry Wise—1416(L)
Direct nitrogen calibration of dead space in gas adsorption systems, William V. Loebenstein—236(L)
Electrophoretic electroosmotic pressure, Irvin Levin—239(L)
Hindered rotation in adsorbed hydrogen adiabatic cooling by adsorbed parahydrogen, Y. L. Sandler—97
Properties of hydrogen chemisorbed on tungsten, Joseph Eisinger—1154
Scattering lengths of inert gases for electrons of negative energy. Field emission through dielectrics, Robert Gomer—443(L)
Size effect in heterogeneous nucleation, N. H. Fletcher—572
Sputtering of silver by hydrogen ions, Cormac D. O'Briain, Amelie Lindner, and Walter J. Moore—3
Sputtering of silver by neutral beams of hydrogen and helium, Alarich Weiss, Lloyd Heldt, and Walter J. Moore—7
Studies of the effect of oxygen on the spectra of barium oxide films, Joseph Cunningham—1196(L)
Vibrational energy exchange between diatomic molecules and a surface, Robert Herman and Robert J. Rubin—591

Thermal Conductivity

Anisotropic thermal conductivity of tetragonal $BaTiO_3$, E. Snitzer and C. R. Mingins—1187(L)
Thermal conductivity of liquid ozone, Thomas E. Waterman, Donald P. Kirsh, and Robert I. Brabets—905

Thermal Diffusion

Suction of the boundary-layer flow along a hot plate as a means of separating gas mixtures, V. C. Liu—967(L)
Thermal diffusion of vacancies in zinc, Paul Shewmon—1032

Thermodynamic Properties

Absorption spectrum of the nitroconium ion, T. A. Turney and G. A. Wright—252(L)
Additivity rules for the estimation of molecular properties. Thermodynamic properties, Sidney W. Benson and Jerry H. Buss—546
Bond dissociation energy of the C_6H_5—F bond, P. Smith —681(L)
Calculation of the energies of gaseous alkali halide dimer molecules, Thomas A. Milne and Daniel Cubicciotti—846
Composition of nitrogen oxide equilibria, Eleonora van Beek-Visser—
Compressibilities of simple metals, W. G. McMillan and A. L. Latter—15
Compressibility of liquid mixtures in relation to conformal solution theory, V. S. Venkatasubramanian—971(L)
Electron impact studies of sulfur dioxide and sulfuryl fluoride, Robert M. Reese, Vernon H. Dibeler, and J. L. Franklin—880
Electrophoretic electroosmotic pressure, Irvin Levin—239(L)
Energies involved in reorienting hydration shells of ions, Warren L. Reynolds—851
Energy of dissociation of the C—H bond in the formyl radical, Ralph Klein and Louis J. Schoen—953(L)
Entropies and energies of dimerization of alkali metal halides, S. H. Bauer, R. M. Diner, and R. F. Porter —991
Errata: High-temperature thermodynamic properties of uranium dioxide, Raymond J. Ackermann, Paul W. Gilles, and R. J. Thorn—237(L)

Erratum: Second-order sum rule for the vibrations of isotopic molecules and the second rule of the mean, Jacob Bigeleisen—237(L)
Heat capacity of small particles of MgO between 1.5° and 4°K, William H. Lien and Norman E. Phillips—000(L)
Heat of sublimation of carbon and the dissociation energy of CO by x-ray densitometry of shock waves, H. T. Knight and J. P. Rink—449(L)
Hindered rotation in adsorbed hydrogen adiabatic cooling by adsorbed parahydrogen, Y. L. Sandler—97
Infrared absorption of cyanogen in the cesium iodide region and CN bond moment, Tatsuo Miyazawa—421
Interpretation of chain-ring equilibria in the polymerization of substituted ε-caprolactam, Hirosuke Yumoto—1234
Investigation by nuclear magnetic resonance of the effects of pressure on the thermal transition and rotator phase of 2,2-dinitropropane, J. J. Billings and A. W. Nolle—214
Mass spectrometric study of ferrous chloride vapor, Richard C. Schoonmaker and Richard F. Porter—116
Mass spectrometric study of the vaporization of LiF, NaF, and Lif—NaF mixtures, Richard F. Porter and Richard C. Schoonmaker—1070
Molecular composition of alkali fluoride vapors, M. Eisenstadt, G. M. Rothberg, and P. Kusch—797
NMR and hyperfine interactions in paramagnetic solutions, R. G. Shulman—945
Nonstoichiometry in uranium dioxide, S. Aronson and J. Belle—151
Pseudorotation in cyclopentane and related molecules, John P. McCullough—966(L)
Recalculation of the Latimer, Pitzer, and Slansky absolute electrode potential—a discussion of its operational significance, Andre J. de Bethune—616
Relation of magnetic disordering to the thermodynamics of solid metallic solutions, R. A. Oriani—679(L)
Solubility of helium and neon in liquid argon. An approximation to the entropy of lattice vacancy formation in liquid argon, F. E. Karasz and G. D. Halsey, Jr.—173
Stability of the formyl radical, Jack G. Calvert—954(L)
Standard enthalpy and free energy of formation of diimide, P. Smith—683(L)
Study of hydrogen bonding in systems of hydroxylic compounds in carbon tetrachloride through the use of NMR, Martin Saunders and James B. Hyne—1319
Substituted methanes. XXVIII. Infrared spectral data and assignments for $CHCl_2F$ and $CHClF_2$ and potential energy constants and calculated thermodynamic properties for $CHCl_2F$, $CDCl_2F$, $CHClF_2$, and $CDClF_2$, Herman B. Weissman, Arnold G. Meister, and Forrest F. Cleveland—72
Temperature dependence of the phase transition in cerium, R. Herman and C. A. Swenson—398
Thermodynamic functions of carbon tetrachloride and monochloride, John S. Gordon—889
Thermodynamic study of SiC utilizing a mass spectrometer, J. Drowart, G. De Maria, and Mark G. Inghram—1015
Thermodynamics of nonstoichiometric nickel tellurides. II. Dissociation pressures and phase relations of tellurium-rich compositions, Edgar F. Westrum, Jr., and R. E. Machol—824
Trimeric association of *t*-butanol by NMR, M. Saunders and J. B. Hyne—253(L)
Ultrasonic absorption associated with tertiary butanol complex formation in dilute solutions in cyclohexane, Raiq S. Musa and Melvin Eisner—

Thermodynamics

Energies involved in reorienting hydration shells of ions, Warren L. Reynolds—851
Erratum: Second-order sum rule for the vibrations of isotopic molecules and the second rule of the mean, Jacob Bigeleisen—237(L)
Expression in terms of molecular distribution functions for the entropy density in an infinite system, R. E. Nettleton and M. S. Green—1365
Internal energy-compressibility-temperature equation for air in dissociative and ionic equilibrium, Perrin Winchell—687
Model of the helix-coil transition in macromolecules. II. Stuart A. Rice and Akiyoshi Wada—233(L)
Osmotic electric or magnetic field, Terrell L. Hill—1419(L)
Quantum statistical theory of plasmas and liquid metals, Robert D. Cowan and John G. Kirkwood—264
Radial distribution functions in binary gas mixtures, Ephraim L. Rubin and Benson R. Sundheim—278
Sedimentation in multicomponent systems, Leonard Peller—415
Statistical thermodynamics of polymer solutions. I. Theory of the second virial coefficient for a homogeneous solute, Edward F. Casassa and Hershel Markowitz—493
Thermodynamic driving force in nucleation and growth processes, John D. Hoffman—1192(L)
Thermodynamics for nonisothermal systems. The classical formulation, J. C. M. Li—747

Transport Phenomena

Approximate formulas for the viscosity and thermal conductivity of gas mixtures, Richard S. Brokaw—391
Molecular diffusion studies in gases in high temperature. I. The point source technique, R. E. Walker and A. A. Westenberg—1139
Molecular diffusion studies in gases at high temperature. II. Interpretation of results on the He—N_2 and CO_2—N_2 systems, R. E. Walker and A. A. Westenberg—1147
Random events in a liquid, R. E.Turner—856
Statistical mechanical theory of the thermal conductivity of binary liquid solutions, Richard J. Bearman—1278
Statistical mechanical theory of transport processes in liquids, Frank C. Collins and Helen Raffel—699
Statistical mechanics of irreversible processes in polymer solutions, Jerome J. Erpenbeck and John G. Kirkwood—909
Theory of diffusion near walls, Marshall Fixman—540
Thermal conductivity of liquid ozone, Thomas E. Waterman, Donald P. Kirsh, and Robert I. Brabets—905
Thermal conductivity of multicomponent gas mixtures, Charles Muckenfuss and C. F. Curtiss—

Ultrasonics

Errata: Absorption and dispersion of sound in chemically reacting fluids, R. M. Mazo—1186(L)
Interrelations involving solutions of equations of equalizing processes and oscillating processes, D. G. O'Sullivan—689
Origin of ultrasonic relaxation in chemically active media, G. S. Verma—1186(L)
Ultrasonic absorption in $MnSO_4$ solutions, S. K. Kor and G. S. Verma—9

Valence and Chemical Bond

Absolute infrared intensities of the fundamental vibrations of NF_3, Paul N. Schatz and Ira. W. Levin—475
Additivity rules for the estimation of molecular properties. Thermodynamic properties, Sidney W. Benson and Jerry H. Buss—546
Bond dissociation energy of the C_6H_5—F bond, P. Smith—681(L)
Bond rupture of HBr^{80m} following nuclear isomeric transition, Ray H. Luebbe, Jr., and John E. Willard—124

Valence and Chemical Bond (continued)

Characteristic B—H stretching frequencies in alkydiboranes, I. Shapiro, C. O. Wilson, and W. J. Lehmann—237(L)
Crystal structure of copper fluoride dihydrate, $CuF_2 \cdot 2H_2O$, S. Geller and W. L. Bond—925
Determination of molecular structures from ground-state rotational constants, C. C. Costain—864
Determination of the binding energy of He_2^+ from ion scattering data, Edward A. Mason and Joseph T. Vanderslice—361
Determination of the O—O bond energy in hydrogen peroxide by electron impact, L. P. Lindeman and J. C. Guffy—247(L)
Electric strength, molecular structure, and ultraviolet spectra of hydrocarbon gases, A. E. D. Heylen—813
Electron spin resonance in transition metal chelates. I. Copper II bis-acetylacetonate, A. H. Maki and B. R. McGarvey—31
Electron spin resonance in transition metal chelates. II. Copper (II) bis-salicylaldehyde-imine, A. H. Maki and B. R. McGarvey—35
Electronic structure of LiH. IV. Hydrogen atom polarization, Oscar Platas and F. A. Matsen—965(L)
Energy levels, atom populations, bond populations in the LCAO MO model and in the FE MO model. A quantitative comparison, Norman S. Ham and Klaus Ruedenberg—1199
Erratum: High-resolution NMR spectrum of liquid propane, P. T. Narasimhan, N. Laine, and M. T. Rogers—1184(L)
Generalized united-atom theory of molecules. I. Spherical contributions in the $s\sigma$ wave functions for H_2^+. Tien Chi Chen—347
Generalized united atom theory. II. A one-center model for cyclic polyenes, Tien Chi Chen—356
Infrared absorption associated with strong hydrogen bonds, Norman Albert and Richard M. Badger—1193(L)
Infrared absorption of cyanogen in the cesium iodide region and CN bond moment, Tatsuo Miyazawa—421
Infrared spectra of the alkaline-earth halides. I. Beryllium fluoride, beryllium chloride, and magnesium chloride, Alfred Büchler and William Klemperer—121
Interaction energies of next-nearest neighbors, Thomas L. Allen—951(L)
Intramolecular twisting effects in substituted benzenes. II. Ground-state properties, Eion G. McRae and Lionel Goodman—334
Ligand field theory of Ni(II) complexes. II. Electronic spectra and structure of some paramagnetic chelates, Gilda Maki—162
Microwave spectrum, structure, dipole moment, and quadrupole coupling constant of propargyl chloride, Eizi Hirota, Takeshi Oka, and Yonezo Morino—444(L)
Microwave studies of the structure of cyclopropyl derivatives, James P. Friend and B. P. Dailey—577
Mobile bond orders in the resonance and molecular orbital theories, Norman S. Ham—1229
Mobile bond orders in conjugated systems, Norman S. Ham and Klaus Ruedenberg—1215
Mobile electron model in a magnetic field, John A. Weil—792
Molecular orbital study of Be_4, Robert D. Cloney and John S. Dooling—425
Morse potentials for excited states of diatomic molecules, Robert W. Keyes—523
NMR and hyperfine interactions in paramagnetic solutions, R. G. Shulman—945
Nuclear quadrupole coupling in the alkali chloroiodides. II. Iodine resonances, R. S. Yamasaki and C. D. Cornwell—
Pi electron correlation in the polyenes, M. J. S. Dewar and C. E. Wulfman—158
Potential function of NF_3, Paul N. Schatz—481
Proton nuclear magnetic resonance chemical shifts, R. E. Glick and S. J. Ehrenson—459(L)
Reinterpretation of nuclear magnetic resonance spectra of decaborane, R. E. Williams and I. Shapiro—677(L)
Semiempirical calculation on the electronic structure of the nitrogen-containing heterocyclic molecules. I. General theory. Tosinobu Anno—1161
Semiempirical calculation on the electronic structure of the nitrogen-containing heterocyclic molecules. II. Electronic structure of pyrazine with particular reference to its $n-\pi$ transition, Tosinobu Anno and Akira Sadô—1170
Spectroscopic comparison of $\pi-\sigma$ to $\pi-\pi$ electron forces between benzene and various diluent molecules, W. W. Robertson, J. M. Robinson, and S. E. Babb, Jr.—243(L)
Structure of potassium hydrogen maleate by neutron diffraction, S. W. Peterson and Henri A. Levy—948(L)
Study of hydrogen bonding in systems of hydroxylic compounds in carbon tetrachloride through the use of NMR, Martin Saunders and James B. Hyne—1319
Triatomic linear molecules containing carbon and oxygen, sulfur, selenium, or tellurium. I. Vibrational spectra of CS_2, CSe_2, SCSe, and SCTe, Tunis Wentink, Jr.—188
Use of $4p$ orbitals in metal-aromatic complexes, David A. Brown—1086
Vibrational spectrum and structure of metal-cyanide complexes in the solid state. IV. $K_3Cu(CN)_4$, Llewellyn H. Jones—463
Zeeman quadrupole spectrum of cyanuric chloride, F. J. Adrian—1381

Viscosity

Approximate formulas for the viscosity and thermal conductivity of gas mixtures, Richard S. Brokaw—391
Correction to the viscoelectric constant, John Hart—960(L)
Effect of pressure on the viscosity of higher hydrocarbons and their mixtures, Edward M. Griest, Wayne Webb, and Robert W. Schiessler—711
Errata: Self-diffusion coefficient and viscosity in liquids, James C. M. Li—1421(L)
Erratum: High-temperature gas viscosities. I. Nitrous oxide and oxygen, C. J. G. Raw and C. P. Ellis—1185(L)
Statistical mechanics of irreversible processes in polymer solutions, Jerome J. Erpenbeck and John G. Kirkwood—909
Statistical thermodynamics of polymer solutions. I. Theory of the second virial coefficient for a homogeneous solute, Edward F. Casassa and Hershel Markowitz—493
Study of the compressions of several high molecular weight hydrocarbons, W. G. Cutler, R. H. McMickle, W. Webb, and R. W. Schiessler—727
Structure of liquid germanium dioxide, J. D. Mackenzie—605

X-Ray Diffraction

Crystal structure of copper fluoride dihydrate, $CuF_2 \cdot 2H_2O$, S. Geller and W. L. Bond—925
Investigation by nuclear magnetic resonance of the effects of pressure on the thermal transition and rotator phase of 2,2-dinitropropane, J. J. Billings and A. W. Nolle—214
Nuclear resonance study of structure and molecular motions in some cobalt complex salts, G. R. Murray, Jr., and J. S. Waugh—207
Small-angle x-ray scattering from solutions of aerosol OT in nonaqueous media, L. A. Siegel—1091
Structure in ionic solutions. III, George W. Brady—1371
Thermal motion in ice and heavy ice, Alfred Zajac—1324
